When I go to add history notes for any person/client in the system I should be able to see that this box should pop up and should basically allow me to add my notes.

The Category drop down options should be:

General – General notes, observations, or account updates.

Communication – Calls, emails, texts, meetings, or conversations with the talent.

Opportunity – Auditions, castings, bookings, brand deals, submissions, or other opportunities.

Internal – Internal team notes, concerns, recommendations, or things other staff need to know.

Make “General” the default.

I would like it to look basically the same way layout wise. Also this is basically how all Add Notes and everything should look for all prospects, applications, active clients, past and future clients. Pop up should appear when I'm trying to add notes to any account types.

TMX – History / Notes

I want the **History / Notes section** on each person/talent profile to function similar to the History / Notes feature in Rent Manager.

The purpose is to have a **running record of important communications, notes, and activity involving that person.**

The History section should display a table with:

- **Type**
- **Date**
- **Note**
- **Category**
- **User**

Every history entry should be **clickable**, so staff can open it and view the complete note/details and any attachments associated with it.

History Categories

Keep the categories simple:

- **General**
- **Communication**
- **Opportunity**
- **Internal**

Automatic History Entries

I want TMX to automatically add a History entry when **meaningful activity occurs**, particularly communication.

Examples:

- Individual email sent
- Individual text/SMS sent
- Phone call
- Important meeting
- Mass email
- Mass text/SMS
- Important follow-up
- Opportunity presented/discussed
- Submission made
- Booking/career-related activity
- Important client/account note

Mass Emails & Text Blasts

This is especially important.

Whenever we send a **mass email or text blast**, the communication should automatically be added to the History of **every individual recipient**.

For example, if we send a text blast to 500 prospects, all 500 people should have that text recorded in their individual History.

It should show something like:

Type: Text Message

Date: 09/02/26 10:30 AM

Note: September Talent Opportunity Announcement

Category: Communication

User: [Employee who sent it]

Same functionality for mass emails.

Manual Notes

Staff should also have an **Add History/Note** function where they can manually document something important.

For example:

Type: Note

Category: Internal

Note: Spoke with talent regarding their interest in expanding into commercial acting. Follow-up scheduled for next week.

User: Automatically populated

Date/Time: Automatically populated

Important — Don't Over-Track

I do not want History to become a technical audit log.

Don't add routine system actions such as:

- Success Manager assigned
- Scout assigned
- Contract created
- Contract sent/viewed/signed/completed
- Every profile field edited
- Routine automated system changes

Those belong in their respective TMX sections.

History should capture meaningful human activity, communication, and notes — things our team would actually want to look back on when reviewing a person's account.

The goal is that if management opens someone's profile, they can go to **History** and quickly understand **what our team has communicated, discussed, documented, or done with that person over time.**

Think of it as a **running activity/notes journal for the person**, similar to Rent Manager's History / Notes.

Text Messages	09/02/26 09:06 AM	Good morning Village Residents, If you or a friend has a Chevy Trax parked between Buildings 3 & 7, you will need to move your vehicle immediately so we are able to close the dumpster and move it. Without prompt attention, it is subject to get relocated. Best, The Village Team		Marcus McDaniel
Text Messages	08/31/26 09:34 AM	Hello tenants of 1333, This is the management team at The Village, and we are texting to inform you that our maintenance supervisor is going to visit the A/B and C/D bathroom today with a 3rd party vendor to get a plan for restoration going to fix the issues we are having in those bathrooms. We will email you later in the evening with what the plan is and the timeline for completion.		Aubrey Friedrich
Text Messages	08/31/26 08:32 AM	Dear Residents, Happy Monday, and have a great first day of classes, MSU students! Rent and utility charges are now posted. Please review your resident portal and current balance. Rent is due on the 1st. If unpaid by 9:00 AM on the 3rd, an \$85 late fee may apply with a 7-Day Notice. If unpaid by the 10th, a \$206.80 court filing fee may be added and the account may proceed through court. For Auto-Pay, schedule payments for the 1st and ensure funds are available. NSF payments may result in a \$50 fee and online payment restrictions. Money orders and cashier's checks are accepted. For billing errors, email AM@VillageatChandler.com.		Marcus McDaniel

Renew Button

TMX Renew Button — Renewal Workflow

The **Renew** button is already built. I just need the functionality behind it.

When a Success Manager, Scout, or authorized Division Agent clicks **Renew**, I want a popup/form to open that creates a **Renewal Offer** for that talent.

The popup should automatically pull the talent's **first and last name** and their current agreement information from their TMX profile. Staff should not have to re-enter information that TMX already has.

The form should be very simple:

Renewal Term

- 6 Months
- **1 Year — Default**
- 2 Years
- 3 Years
- Custom

The system should automatically calculate the **renewal start and end dates** based on the existing agreement and selected term.

For example:

Current Agreement: 08/01/2026 – 07/31/2027

Renewal Term: 1 Year

New Agreement: 08/01/2027 – 07/31/2028

Then ask:

Are the existing representation terms staying the same?

- Yes
- No

If **No**, there should be a place to indicate that the terms need to be modified/reviewed.

Then have:

Additional Notes / Special Terms

Optional text box.

Once the form is completed, the employee should be able to:

Cancel | Preview Offer | Create & Send

Document

The renewal offer should be generated from a **pre-saved renewal template in TMX** rather than created manually.

TMX should populate the template using the information already stored on the talent's account, such as:

- Talent name
- Legal name
- Current department
- Renewal dates
- Commission terms
- Other applicable agreement information

After **Preview Offer**, the employee confirms it and clicks **Create & Send**.

The completed document then needs to be sent to **DocHub**, since that's what we're using for all contract signing.

After it's sent

TMX should track the renewal status:

Draft → Sent → Viewed → Signed → Completed

Ideally, DocHub's status should sync back into TMX.

Once the renewal is fully signed, TMX should:

1. Mark the renewal as **Completed**
2. Save the executed agreement to the talent's documents
3. Update the talent's current agreement dates
4. Keep the previous agreement in the talent's **Agreement History**
5. Add the renewal actions to the talent's **History**

So the overall experience should be:

Click Renew → Small Form → Preview → Create & Send → DocHub → Signed → TMX Automatically Updated

The main goal is to make this **very automated**. The employee should only be making the renewal decisions; TMX should handle pulling the information, calculating dates, generating the document, and tracking the renewal.

Replace Unit with Division; Replace the word Lease to Contract; everything else should stay the same and currency market rent needs to say Current % Rate: which varies for clients but system should auto pull from there current contract.

Right-Hand Quick Action Bar

TMX Requirement: Right-Hand Quick Action Bar

Overview Implement a sticky, right-hand sidebar menu across every person/talent profile view (regardless of stage: Prospect, Applicant, Active, Former, etc.). This replicates the quick-access sidebar design from Rent Manager Express to let staff perform quick actions without navigating away from the current record.

1. Sidebar Layout & Icon Mapping

The sidebar should sit docked on the far-right edge of the screen and contain **6 core action icons**:

- **Icon 1: Profile Navigation** (*Bullet List Icon*)
 - **Tooltip:** Quick View / Stages
 - **Menu Options:**
 - View Talent Profile
 - Stage Status & Lifecycle
 - Assigned Team (Agent, Scout, Manager)
 - Background & Screening Status
- **Icon 2: Quick Add** (*Plus Icon*)
 - **Tooltip:** Quick Add
 - **Menu Items by Sub-Header:**
 - **Talent Info:** Add Representation Agreement / Send Renewal (DocHub), Initiate Screening, Log Issue/Concern
 - **History / Note:** Add Note, Add Phone Call, Add Meeting, Log Email/SMS
 - **Scheduling:** Add Appointment, Add Audition / Booking Task
 - **Financial:** Add Charge, Add Payment, Add Payout / Commission
- **Icon 3: Shortcuts & Linked Items** (*Copy/Square Icon*)
 - **Tooltip:** Related Records
 - **Menu Options:**
 - Invoices & Ledger
 - Signed Contracts & DocHub Documents
 - Screenings & Background Checks
- **Icon 4: Communication Center** (*Mail Icon*)
 - **Tooltip:** Send Direct Message
 - **Menu Options:**
 - Send Individual Email
 - Send SMS / Text
 - Send DocHub Document Request
- **Icon 5: Reports & Exports** (*Document Icon*)
 - **Tooltip:** Reports
 - **Menu Options:**
 - Talent Profile Sheet (PDF)
 - Account Ledger Statement

- Activity / History Export
 - Contract Summary
- **Icon 6: Profile Settings** (*Gear Icon*)
 - **Tooltip:** Settings
 - **Menu Options:**
 - Talent Portal Access Settings
 - Notification Preferences
 - Payment / Direct Deposit Settings

2. Behavior & UI Requirements

- **Global Access:** Must remain visible and fixed on the right screen border when scrolling through any person/talent record in TMX.
- **Hover Tooltips:** Hovering over an icon displays an orange tooltip indicating the section name (e.g., "Quick Add", "Reports", "Settings").
- **Flyout Menu:** Clicking an icon opens a flyout menu directly to the left of the sidebar containing the organized action items. Clicking outside the menu closes it.
- **Contextual Auto-Fill:** Clicking any action item from the sidebar (such as *Add Note* or *Send Renewal*) must automatically pass the active person's **Talent ID**, **First Name**, and **Last Name** into the modal or form.

Service Issues / Support Ticketing System

TMX Requirement: Service Issues / Support Ticketing System

Overview

Implement a centralized "Issues" system for managing support requests, client concerns, contract questions, or operational tickets. The feature requires two distinct interfaces: a comprehensive modal for **Internal Staff** (matching the layout in the provided screenshots) and a simplified form for **Clients/Talent** submitting tickets through their portal.

1. Staff View: Full "New Issue" Modal

This view opens when staff click **Quick Add** $\rightarrow$ **Add Issue** or log a ticket internally. It uses a left-hand vertical tab layout to jump between card sections.

Left Navigation Tabs:

- Issue Description
- Issue Links
- Issue Details & Info
- Issue Dates
- Custom / Talent Fields

Form Fields by Card Section:

- **Card 1: Issue Description**
 - **Title** (Text Input, Required)
 - **Description** (Expandable Text Area / Rich Text)
- **Card 2: Issue Links** (*Relational Connections*)
 - **Talent / Client** (Search & Link Person Profile)
 - **Division / Department** (Link Modeling, Acting, Commercial, etc.)
 - **Opportunity / Booking** (Link related job or project, if applicable)
- **Card 3: Issue Details & Info**
 - **Assigned To User** (Dropdown: Staff / Agent / Success Manager)
 - **Vendor / Third Party** (Dropdown / Search: External agency, client, legal, accounting, etc.)
 - **Status** (Dropdown: Open, In Progress, Pending Client, Resolved, Closed)
 - **Priority** (Dropdown: Low, Medium, High, Urgent)
 - **Category** (Dropdown: Contract/Legal, Payment/Commission, Booking Issue, Profile/Media Update, General)
 - **Workflow Project** (Dropdown: Assign to specific agency initiative/campaign)
 - **Checkboxes**: Permission Granted to Contact, Needs Management Escorted Action, Urgent Follow-Up
- **Card 4: Issue Dates**
 - **Open Date** (Auto-populates Current Date/Time)
 - **Due Date** (Date Picker)
 - **Scheduled Follow-Up** (Date Picker)

2. Client / Talent Portal View: Simplified Form

When a client or talent logs into their portal to submit a support request or report a concern, show a streamlined, lightweight version.

Client Form Fields:

- **Category** (Dropdown: Payment Question, Contract Help, Booking Issue, Profile Update, Other)
- **Subject / Title** (Text Input, Required)
- **Message / Description** (Text Area, Required)
- **Attachments** (File Upload for screenshots, documents, images)

Backend Automation for Client Submissions:

- Auto-link the ticket to the logged-in user (**Talent/Client ID**).
- Auto-assign **Open Date** to time of submission.
- Default **Status** to **Open / Unassigned** (or route based on selected Category).
- Auto-generate an **Automatic History Note** on the person's profile:
 - *Type*: Issue
 - *Category*: Internal
 - *Note*: "New support ticket submitted: [Title]"
 - *User*: System / Talent Name

Central Issues Dashboard

TMX Requirement: Central Issues Dashboard (Populated Data Table Layout)

Overview

Re-architect the main **Issues / Support Tickets** dashboard into a high-density, real-time data table directly modeled after Rent Manager Express. This page lists all active, unassigned, and resolved support requests submitted by clients/talent via the portal or added manually by staff.

1. Page Header & Toolbar Layout

- **Top Left Controls:**
 - **Select an Issue List:** View preset dropdown (e.g., *Default List*, *Open High-Priority*, *My Assigned Tickets*).
- **Top Right Actions:**
 - **+ Add Issue:** Primary action button (Opens New Issue modal).
 - **+ Add List:** Button to create and configure a custom saved column layout/filter group.
 - **Save List:** Save layout or column adjustments to current list view.

2. Search, Filter & Bulk Action Bar

- **Bulk Actions Menu:** Dropdown to check multiple table rows and batch-assign staff, update status, change priority, or archive tickets.
- **Search Field:** Keyword search box filtering across Issue IDs, Titles, Talent Names, or Descriptions (*Find an issue*).
- **Status Filter:** Select dropdown for quick status switching (, *Unassigned*, *Open*, *In Progress*, *Resolved*, *Closed*).
- **Filter Toggle Controls:**
 - **Filter Toggle Button:** Icon button to collapse/expand advanced filters.
 - **Show Quick Filters:** Toggle to show active filter tags (e.g., *Assigned To = <Unassigned>*).

3. Core Data Table Architecture & Columns

The table layout must strictly follow a left-aligned, high-density row format:

- **Issue ID:** Unique numeric tracking ID (e.g., *115079*).
- **Opened:** Date timestamp (*MM/DD/YY*).
- **Created By:** Displays submitting user name or system tag (e.g., *<Talent Portal Submitted>* or Staff Name *QKelly*).
- **Status:** Current state badge (e.g., *<Unassigned>*, *New*, *In Progress*, *Resolved*).
- **Age:** Live timer showing duration since creation (*HH:MM:SS*, e.g., *0:00:14*).

- **Issue (Title/Subject):** Bold/semi-bold truncated issue description (e.g., *Reschedule briefing call...*).
- **Talent / Client:** Hyperlinked name of the associated person/brand (e.g., *Maya Rivera / Nike*).
- **Division / Department:** Associated division (e.g., *Modeling, Acting, Commercial*).
- **Category:** Source or type badge (e.g., *Portal Submitted, Maintenance, Scheduling, Contract*).
- **Priority:** Severity tag (e.g., *<Unassigned>, Low, Medium, High, Urgent*).
- **Assigned To:** Assigned staff member's name (e.g., *ARome* or *<Unassigned>*).
- **Row Context Menu (3-Dot Action Menu):** Far-right column featuring a three-dot vertical menu (⋮) on every row for quick actions (*Edit, Quick Assign, Change Status, Delete*).

4. Table Footer Summary Bar

A fixed footer bar at the bottom of the table providing live list metrics:

- **Avg Age:** Displays average open time across displayed issues (e.g., *Avg Age: 18:15:18*).
- **Oldest Issue:** Highlights the ID and age of the longest open ticket (e.g., *Oldest Issue: #105933*).
- **Record Counter:** Live count displaying filtered vs. total issues (e.g., *27 of 745 Issues*).

5. Interactive Behavior & History Integration

- **Row Click:** Clicking anywhere on a row slides open the **Issue Details Drawer** to read full notes, manage status, or reply.
- **Automated Profile Logging:** Updating or closing an issue writes an automatic entry to the linked person's **History / Notes** table:
 - **Type:** Issue
 - **Category:** Internal
 - **Note:** "Issue #[ID] updated to [Status] by [User]"

Invoicing System ("Add Invoice" Modal)

TMX Requirement: Invoicing System ("Add Invoice" Modal)

Overview

Implement a standardized "Add Invoice" modal for billing clients, talent, or corporate partners. While primary ownership lies with the **Account Manager**, the feature should be accessible globally to all staff roles via the right-hand sidebar menu (**Quick Add** $\rightarrow$ **Financial** $\rightarrow$ **Add Invoice**).

1. Top Layout: Metadata & Linkages

- **Box 1: Recipient Information**
 - **Recipient / Billed Party** (Search/Select Field: Talent, Client, External Agency, Brand)
 - **Division / Department** (Dropdown to link invoice to Modeling, Acting, Commercial, etc.)
 - **From (Issuer)**: Auto-populates Nzinga Management company/branch address.
 - **To (Billed Entity)**: Auto-populates recipient's name and address on file based on selection.
- **Box 2: Invoice Details**
 - **Invoice Date** (Date Picker, defaults to Today)
 - **Payment Terms** (Dropdown: *Due Immediately, Net 15, Net 30, Net Month, Due on 1st, Due on 15th, Due on 30th*)
 - **Due Date** (Date Picker: Auto-calculates based on chosen Payment Terms, but allows manual override)
 - **Sales Rep / Account Manager** (Dropdown: Auto-populates active staff member creating the invoice, with option to select designated Account Manager)
 - **Comments / Public Notes** (Text Area: Terms, payment instructions, memo shown on final PDF)
- **Box 3: Attachments & Tax**
 - **Attachments Drag & Drop Box** (Upload/Paste receipts, booking confirmations, or contracts)
 - **Taxable Checkbox** (Toggle: Shows/Hides Taxable Amount, Tax Type, and Tax % fields)

2. Line Item Table & Totals

- **Itemization Columns:**
 - **Product / Fee Type** (Dropdown: Agency Fee, Commission, Promotional Material, Comp Card, Portfolio Fee, Event Pass, Other)
 - **Quantity** (Numeric Input)
 - **Description** (Text Input)
 - **Linked Expense / Booking** (Dropdown/Search: Link to specific project, job, or internal expense item if applicable)
 - **Charge Type** (Dropdown: Billing category code)

- **Rate** (Currency Input)
- **Amount** (Calculated Field: $\text{Quantity} \times \text{Rate}$)
- **Actions & Calculations:**
 - **+ Add Detail** Button to add additional line items.
 - **Totals Footer:** Automatically calculates **Sub Total**, **Tax Amount**, and **Total Amount**.

3. Permissions & Automated Logging

- **Role Visibility:** Accessible to all internal user roles via the sidebar menu (**Quick Add** $\rightarrow$ **Add Invoice**).
- **Automation on Submission:**
 - Generates a formal TMX Invoice PDF.
 - Adds an automatic entry to the recipient's **History / Notes** ledger:
 - **Type:** Financial
 - **Category:** Internal
 - **Note:** "Invoice #[Invoice Number] created for \$[Total Amount] - [Primary Line Item Description]"
 - **User:** Logged-in Staff Member

Unified Email Delivery System

TMX Requirement: Unified Email Delivery System (Single Email & Mass Blast)

Overview

The native Email Composer handles two primary workflows: **Individual Direct Messaging** (triggered via profile action or sidebar) and **Bulk Email Blasts** (triggered via audience lists or talent directory filtering). Both workflows utilize the exact same UI composer, rich text controls, custom signature engine, and attachment capabilities.

1. Workflow Triggers

- **Trigger 1: Single Email Action**
 - *Source:* Clicking "Send Email" on an individual profile or selecting **Communication Center rightarrow Send Email** from the right-hand sidebar.
 - *Behavior:* Pre-fills the **To...** field with the single recipient's email address. **Send Individually** defaults to **Checked** and disabled.
- **Trigger 2: Mass / Bulk Email Blast**
 - *Source:* Selecting multiple records from the Talent Directory / Prospect List and clicking **Bulk Actions rightarrow Email Blast**.
 - *Behavior:* Pre-fills the **To...** field with the total recipient tag/count (e.g., **500 Selected Talent**). **Send Individually** defaults to **Checked** to force 1-to-1 recipient privacy.

2. Core Features & Controls

- **Recipient Privacy Safeguard (Send Individually Logic):**
 - When sending mass emails, checking **Send Individually** forces TMX to generate separate, individual outbound emails for each recipient.
 - *Crucial Privacy Rule:* Prevents any recipient from seeing other recipients' email addresses or names on the email header/thread.
- **Signature Engine:**
 - Automatically pulls and injects the sending staff member's saved HTML email signature at the bottom of the body text field.
 - Supports staff job title, direct phone number, agency branding logos, and custom links.
- **Attachments & Media:**
 - Supports drag-and-drop file attachments (e.g., booking briefs, PDF scripts, comp card templates) for both single and mass blasts.
- **Template Library Integration:**
 - Allows staff to select pre-saved HTML email templates from the **Insert Email Template** dropdown, pre-populating subject lines and body text dynamically.

3. Automated History Ledger Logging (Mass Blast vs. Single)

To maintain accurate records without overloading the system, history notes must be written per recipient:

- **Bulk Blast Logging Logic:**

- When a mass blast is executed (e.g., sent to 500 prospects), TMX runs a background queue job that creates **500 distinct History Notes**—one added directly to each individual recipient's profile ledger.
- *History Record Format:*
 - **Type:** Email
 - **Category:** Communication
 - **Note:** Mass Blast Sent: "[Subject Line]"
 - **User:** [Staff Member Who Executed Blast]
 - **Date/Time:** Auto-stamped at send time.

Text Messaging Center & SMS Engine

TMX Requirement: Text Messaging Center & SMS Engine

Overview

Implement a two-pane **Text Messaging Center** dashboard that serves as a unified inbox for all individual SMS conversations and mass SMS blasts. The interface allows staff to compose new texts, view thread histories, and reply in real time while automatically updating each person's individual profile history.

1. Navigation & Profile Linkage (Crucial Feature)

- **Direct Account Linking:** Clicking the recipient's **Name** or **Avatar/Initials** anywhere in the messaging center—especially in the top header of the right-side chat pane—must immediately hyperlink directly to their main TMX account profile page.
- **Context Retention:** Navigating to their profile from the text center must retain all stage/lifecycle data (Prospect, Applicant, Active Talent, Client, Former) and reflect history log updates in real time.

2. Left Pane: Conversations & Inbox List

- **Controls & Search:**
 - **New Text Button:** Opens a modal/flyout to select recipients (single or multi/mass selection) and start a conversation.
 - **Search Bar:** Filters texts by keyword, recipient name, or phone number.
 - **Quick Filters:** Filters for *Days To Show* (e.g., 30 Days), *Group by Phone Number*, and Stage pills (*Prospect, Applicant, Active Talent, Client*).
- **Thread List Items:**
 - Avatar / Initials
 - Recipient Name (clickable to select thread) + Stage Badge (e.g., *Zoe Smith Prospect*)
 - Timestamp (Date & Time of last message sent/received)
 - Phone Number
 - Division / Department (e.g., Modeling, Acting)
 - Assigned Staff / Agent
 - Message Preview (Snippet of the latest text, with directional icons: $\nearrow$ Outbound, $\swarrow$ Inbound)

3. Right Pane: Live Thread & Message Composer

- **Header Controls:**
 - **Recipient Header:** Displays Name (Hyperlinked to Profile), Stage Badge, Assigned Manager, Direct Phone, and Division.
 - **Quick Actions:** Direct links to *View Talent Profile*, *Add Issue/Ticket*, or launch related sidebar actions.
- **Chat History Window:**
 - Displays full chronological SMS exchange between TMX staff and the selected person.

- Each message bubble displays: Staff Name/Sender, Date & Time stamp, and Message Content.
- **Composer Controls:**
 - **Message Input:** Multi-line text field (**Type message here...**).
 - **Media / Attachment Button:** Allows attaching image files or media (MMS support for comp cards, headshots, project flyers).
 - **Send Button:** Triggers real-time SMS transmission.

4. Bulk SMS Blast Workflow & History Integration

- **Mass Text Engine:** When launching a **New Text** to a group or executing a bulk action from the directory, TMX sends individual 1-to-1 SMS messages to each recipient (no group text threads).
- **Automated History Ledger Logging:** Every SMS sent or received (individual or mass blast) automatically writes to the person's **History / Notes** table:
 - **Type:** Text Message
 - **Category:** Communication
 - **Note:** "[Message Body / Snippet]"
 - **User:** [Staff Member Who Sent / "System" for Inbound]
 - **Date/Time:** Live timestamp at delivery.

The screenshot displays the Rent Manager Text Messaging Center interface. The top navigation bar includes the Rent Manager logo, a search bar, and a 'Command Launch' button. The main header is 'Text Messaging Center'. Below this, there's a search bar with the placeholder 'Find a text...' and a 'Group by phone number' checkbox. A 'Quick Filters' section shows 'Days To Show = 30' and a 'Show Quick Filters' button. A 'New Text' button is also present.

The main content area is a table listing tenants with columns: Name, Date, Phone, Property, Unit, and Manager. The table contains several entries, including Madison Krause, Cortney Gillia, Brian Prost, Ty Jenkins, Aboubacar S., and Wendy Santiago.

On the right side, there's a detailed view of a message conversation for Madison Krause. It shows the manager's name, phone number, and a list of messages. The messages are dated 08/31/26 and 09/02/26. The messages are from Quiana Kelly to Madison Krause, discussing a lease document and keys.

At the bottom of the right panel, there's a 'Type message here...' input field and a 'Send' button.

Name	Date	Phone	Property	Unit	Manager
MK Madison Krause Tenant	09/02/26 12:28 PM	(248) 943-0981	The Village at Chandler	6-0625-B	Aubrey Friedrich
CG Cortney Gillia... Prospect	09/02/26 11:55 AM	(213) 829-6060	The Village at Chandler		Aubrey Friedrich

TJ Ty Jenkins Tenant	09/02/26 10:33 AM	(517) 512-3769	The Village at Chandler	19-1912-C	Aubrey Friedrich
TJ Ty Jenkins Tenant	09/02/26 10:22 AM	(517) 512-3769	The Village at Chandler	19-1912-C	Aubrey Friedrich
AS Aboubacar S... Prospect	09/02/26 10:20 AM	(517) 317-7177	The Village at Chandler	1-0111-A	Aubrey Friedrich
WS Wendy Santiag... Tenant	09/02/26 10:03 AM	(734) 340-7128	The Village at Chandler	15-1523-D	Aubrey Friedrich

Talent Account Profile UI & Layout Overhaul

TMX Requirement: Talent Account Profile UI & Layout Overhaul

Overview

Re-architect the Talent Account view to match the compact dashboard structure of Rent Manager Express (RMX). The goals are to eliminate vertical page scrolling, enforce strict left-to-right text alignment, replace clutter with pop-up/slide-out drawers, and consolidate key data into a structured grid layout.

1. Text Alignment & Layout Mechanics

- **Left-Aligned Text Flow:** Enforce standard left-aligned text mechanics for all data fields (`text-align: left;`). Field labels must sit on the left, with their corresponding values immediately following to the right. Eliminate large dead spaces between labels and values.
- **Dashboard Layout Grid:** Replace the endless vertical layout with a multi-column card/widget grid. All primary profile information must fit on a single screen without vertical scrolling.

2. Action Bar & Top Summary Banner

- **Compact Header Banner:**
 - Displays: Avatar, Talent Name, Account #, Lifecycle Stage Badge (e.g., *Active Talent*), Primary Phone, and Primary Email.
 - **Financial Summary Pills:** Align balance and payout metrics to the top-right corner.
- **Remove Horizontal Action Buttons:** Remove the cluttered horizontal row of action buttons (*Add Note*, *Add Contact*, *Renew*, *Add Payment*, *Add Charge*, etc.).
- **Migrate to Universal Sidebar:** All profile creation actions must route through the global right-hand quick-action sidebar (**Quick Add** menu) to keep the top banner completely clear.

3. Section Consolidation & Pop-Up Modals

Move secondary forms and lengthy tables out of the main page flow and into click-to-open modals or slide-out drawers:

- **Account Details Card (Left Column):**
 - Display key fields: Legal Name, Stage, Assigned Agent, Division, Source, and Contact Info.
 - *UI Fix:* Add an **Edit Profile** button on the card that opens a focused pop-up modal to edit custom fields, rather than displaying long, empty editable forms directly on the main page.
- **History / Notes Widget (Top Right):**

- Displays the latest 5–10 entries from the running activity ledger.
- *Interaction:* Clicking any row opens the full note detail modal. A **View All** link opens the full searchable ledger view.
- **Transactions & Financials Widget (Middle Row):**
 - Displays recent invoices, charges, and payouts in a compact table.
- **Service Issues / Support Tickets Widget (Middle Row):**
 - Displays open support tickets, status badges, and priorities.
- **Contracts & Documents (Bottom Row / Pop-Up Drawer):**
 - Display current active agreements in a condensed card.
 - *UI Fix:* Convert past/historical contracts and raw document uploads into a **View Documents** slide-out drawer or modal instead of taking up permanent page section space.

4. Tabbed Organization for Secondary Data

For non-critical data categories, use a horizontal tab control bar within cards rather than stacking sections vertically:

- **Tab 1:** General Details
- **Tab 2:** Custom / Agency Fields
- **Tab 3:** Secondary Contacts & Addresses
- **Tab 4:** Linked Opportunities / Bookings

Task Management System

TMX Requirement: Task Management System ("Add Task" Modal)

Overview

Implement a task management modal for creating internal assignments, follow-ups, audition prep reminders, and agency workflow to-dos. It should be globally accessible via the right-hand quick-action sidebar (**Quick Add** $\rightarrow$ **Scheduling** $\rightarrow$ **Add Task**) or directly from any person's profile record.

1. Top Section: General Info & Schedule Options

- **Card 1: General Information (Left Box)**
 - **Subject:** Text input field for the main task title (Required).
 - **Description:** Expandable text field for detailed notes, instructions, or task specs.
 - **Display Category / Color Code:** Dropdown to tag tasks visually (e.g., *Default*, *Urgent*, *Audition Prep*, *Contract Follow-up*, *Onboarding*).
 - **Assigned Users:** Multi-select dropdown to assign the task to one or multiple staff members (e.g., *Scouting Agent*, *Success Manager*, *Legal*).
- **Card 2: Schedule Options (Right Box)**
 - **Due Date & Time:** Date picker and time selector for task deadlines.
 - **Associated Action:** Dropdown linking to workflow actions (e.g., *Send Contract*, *Follow Up Call*, *Confirm Booking*, *Update Portfolio*).
 - **Reminder Controls:** Checkbox enabling automated pop-up notifications or email reminders set by **Days**, **Hours**, or **Minutes** prior to the due date.
 - **Status / Closed State:**
 - **Closed Checkbox:** Checking this marks the task complete.
 - **Closed User & Closed Date:** Auto-populates who marked it complete and at what date/time stamp (Read-only fields).
 - **Recurring Options:**
 - **Recurring Checkbox:** Enables recurring task rules.
 - **Pattern Dropdown:** Select frequency (*Daily*, *Weekly*, *Monthly*, *Yearly*) and interval (e.g., *Every 1 Days*).
 - **End Conditions:** Dropdown for ending recurrence (*Never End*, *End After X Occurrences*, *End By Date*).

2. Bottom Section: Links & Attachments

- **Card 3: Links / Relational Connections (Bottom-Left Box)**
 - **Entity Type Dropdown:** Select record type to link (e.g., *Talent / Client*, *Opportunity / Job*, *Division*, *External Brand*).
 - **Search & Add Link:** Search input field to find and attach specific profiles or bookings to the task.
 - **Auto-Link Behavior:** When launched directly from a person's profile page, pre-fill and auto-link that record.
- **Card 4: Attachments (Bottom-Right Box)**

- **Drag & Drop / Paste Zone:** Area supporting direct upload or clipboard pasting of scripts, project briefs, image references, or PDF documents associated with the task.

3. Automated History & Notification Rules

- **Auto-Logging to Ledger:**
 - When a task linked to a person is created or marked completed, write an entry to their **History / Notes** table:
 - **Type:** Task
 - **Category:** Internal
 - **Note:** "Task Created: [Subject] - Due [Date]" (or "Task Completed: [Subject]")
 - **User:** Assigned/Completing Staff Member
- **Dashboard Task Feed:** Populate pending tasks on the assigned user's personal TMX dashboard agenda view.

Interactive Calendar & Appointment System

TMX Requirement: Interactive Calendar & Appointment System

Overview

Re-architect the Appointments section from a static list table into a full, interactive visual calendar interface (Month, Week, Day, and Agenda views). The system allows staff to view schedules, drag-and-drop appointments, manage conflict warnings, and book events directly—either globally or tied to specific talent/client records.

1. Core Calendar Interface & Controls

- **Visual Display Views:** Switchable view modes at the top navigation bar:
 - **Month View:** Visual grid showing high-level daily events.
 - **Week View:** Time-block grid (Hour by Hour) for managing day-to-day meetings, auditions, and calls.
 - **Day View:** Detailed hour-by-hour breakdown for individual agent/staff daily schedules.
 - **Agenda View:** Compact list grouped by date for quick scanning.
- **Filter Sidebar / Header:**
 - **Filter by Staff / User:** Filter events by assigned Agent, Manager, Scout, or view team-wide schedules.
 - **Filter by Division / Category:** Toggle visibility for *Auditions*, *Client Meetings*, *Shoot Dates*, *Renewals*, or *Internal Reminders*.
 - **Filter by Person:** View appointments associated with a specific talent/client.

2. Interactive Event Creation & "Add Appointment" Modal

- **Grid Interaction:**
 - **Click-to-Add:** Clicking any time slot on the Week/Day grid opens the "Add Appointment" modal with pre-filled Start Time and Date.
 - **Drag & Drop / Resizing:** Allow staff to drag events to reschedule or pull bottom edges to extend event duration.
- **"Add Appointment" Modal Fields:**
 - **Title / Subject:** Text input (e.g., *Commercial Audition - Nike Campaign*).
 - **Linked Talent / Client:** Search bar to link one or multiple talent profiles.
 - **Location / Virtual Link:** Physical location address or Zoom/Google Meet link.
 - **Start Date & Time / End Date & Time:** Date/time pickers with an **All-Day Event** toggle.
 - **Assigned Staff / Attendees:** Select host agent/staff and optional attendees.
 - **Category & Color Code:** Visual color tags (e.g., *Blue = Audition*, *Green = Booking*, *Orange = Client Meeting*, *Red = Urgent*).
 - **Description / Notes:** Rich text field for scripts, brief details, or prep instructions.
 - **Attachments:** Upload option for audition sides, scripts, or event briefs.
 - **Recurrence Rule:** Optional repeat settings (*Daily*, *Weekly*, *Monthly*).

3. Automated History Ledger & Profile Integration

- **Profile Appointments Tab:** On individual profile pages, embed this visual calendar pre-filtered *only* for events linked to that specific person.
- **Automated History Note Logging:** Creating or modifying an appointment automatically logs an entry to the linked person's **History / Notes** table:
 - **Type:** Appointment
 - **Category:** Opportunity / Internal
 - **Note:** "Appointment Scheduled: [Title] on [Date/Time] at [Location/Link]"
 - **User:** Staff Member Who Scheduled

The screenshot displays the TMX Interactive Calendar & Appointment System interface. The main calendar view shows a weekly layout for August 31, 2026. A 'New Appointment' modal is open, allowing users to add a new appointment. The modal includes fields for Title / Subject, Assigned Staff / Attendees, Linked Talent / Client, Category & Color Code, Location / Virtual Link, Start Date & Time, End Date & Time, All-Day Event, Description / Notes, and Attachments. The calendar shows appointments for Zoe Smith, including 'Audition Prep - Ford' and 'Commercial Audition - Nike Campaign'.

Appointments & Meetings

TMX Requirement: Appointments & Meetings Master List Overhaul

Overview

Re-architect the main **Appointments & Meetings** master page into a high-density, searchable data ledger modeled after Rent Manager Express. This page serves as the agency-wide list view for tracking, filtering, and managing all scheduled briefings, castings, auditions, and client calls across all team members.

1. Header Control Bar & View Toggle

- **Search Input:** Keyword search box filtering across *Title, Talent Name, Client Name, Agent Name, or Location* (**Find an appointment**).
- **Saved Filters Dropdown:** Presets to quickly load specific filter states (e.g., *My Scheduled Meetings, Castings This Week, Zoom Calls Only*).
- **Advanced Filter Button:** Icon toggle button to collapse/expand detailed filter parameters.
- **Date Range Filters:**
 - **Start Date / End Date Pickers:** Dual date controls to isolate specific timeframes (e.g., **04/24/2026** to **05/24/2026**).
- **View Mode Switcher:** Toggle buttons on the top right allowing staff to switch seamlessly between this **List View** and the interactive **Calendar Grid View**.
- **Primary Action Button:**
 - **+ Add Appointment:** Prominently placed button on the top right opening the **Add Appointment Modal**.

2. Master Data Table Architecture & Columns

Reconfigure the table to use high-density, left-aligned rows that merge Rent Manager's search capabilities with TMX agency fields:

- **Title:** Bold event title (e.g., *Nike initial briefing call*).
- **Clients:** Hyperlinked brand/client name (e.g., *Nike*).
- **Agents:** Staff member/agent assigned to host or manage the call (e.g., *Sarah Chen*).
- **Talent:** Hyperlinked talent profile name(s) attached to the appointment (e.g., *Maya Rivera*).
- **Starts (Start Date & Time):** Full start timestamp (**MM/DD/YYYY, HH:MM AM/PM**).
- **Ends (End Date & Time):** Full end timestamp (**MM/DD/YYYY, HH:MM AM/PM**).
- **Reminder Date:** Set reminder trigger timestamp (**MM/DD/YYYY, HH:MM AM/PM**).
- **Location / Link:** Physical address or hyperlinked virtual meeting room (e.g., *Zoom, Google Meet, Studio B*).
- **Row Action Column:** Far-right action column with an **Edit** button or 3-dot context menu (⋮) for quick adjustments or cancellations.

3. Interactive Behavior & Automated Profile Logging

- **Hyperlink Navigation:** Clicking the **Talent** or **Client** name directly inside the list row opens their respective profile record in a new tab.
- **Row Selection:** Clicking anywhere else on the row slides open the **Appointment Details Drawer** to review notes, sides, or meeting links.
- **Automated History Ledger Logging:** Adding, editing, or canceling an appointment automatically writes a record to the linked talent/client's **History / Notes** table:
 - **Type:** Appointment
 - **Category:** Opportunity / Internal
 - **Note:** "Appointment Scheduled: [Title] with [Client] - [Starts Timestamp]"
 - **User:** Staff Member Who Scheduled

Two-Way Calendar Sync

TMX Requirement: Two-Way Calendar Sync, Self-Scheduling Rules & Conflict Prevention

Overview

Establish a real-time, two-way database connection between the **Appointments & Meetings Master List** and the **Interactive Calendar Grid**. Additionally, configure self-scheduling logic for the **Client Web Access Portal** that enforces agency operating hours, respects remote staff availability, and blocks double-booking.

1. Real-Time Two-Way Sync (List $\leftrightarrow$ Visual Calendar)

- **Unified Database Model:** The **Appointments List View** and the **Calendar Grid View** must query the exact same data endpoint.
- **Bi-Directional Creation:**
 - Adding an entry on the **Appointments & Meetings** list page must immediately create a time block on the **Calendar Grid View**.
 - Adding an event directly on the **Calendar Grid View** (or via Quick Add) must automatically append a row to the **Appointments List Table**.
 - Any edit or deletion in either view must instantly reflect across both views in real time without requiring a manual page refresh.

2. Client Web Access Portal (Self-Scheduling Rules)

- **Business Operating Hours Enforcer:**

Restricts the client-facing time-slot picker to valid agency windows:

 - **Monday – Friday:** 9:00 AM – 6:00 PM
 - **Saturday:** 10:00 AM – 5:00 PM
 - **Sunday:** 1:00 PM – 5:00 PM
 - *After-Hours/Overtime Exceptions:* Times outside these default windows should be greyed out/disabled on the portal calendar unless manually overridden by internal staff.
- **Remote Staff Custom Hours Override:**
 - Allow staff profiles to set custom working windows (e.g., 9:00 AM – 2:00 PM EST or *Flex Hours*).
 - When a client selects a specific Agent/Staff member to meet with, the portal scheduler must check that specific employee's custom working hours rather than just the general agency default.
- **Conflict Detection & Double-Booking Prevention:**
 - Before confirming a portal booking, TMX must execute an instant availability check against:
 1. Existing TMX Appointments & Calendar Events.
 2. Linked Staff Google Calendar/Outlook events (if synced).
 3. Pending/Unconfirmed Meeting Requests.
 - **Conflict Error UI:** If a client selects an unavailable time slot or an overlapping time, block submission and display a friendly prompt:

"That time or date is currently unavailable. Please choose a different time or date to schedule your meeting."

3. Automatic Calendar Blocking & Profile History Logging

- **Calendar Blocking:** Confirmed portal bookings automatically mark the assigned staff member's calendar slot as **Busy/Blocked**, preventing internal staff from double-booking that time.

- **Automated History Ledger Note:**

When a client books an appointment via the portal, auto-log an entry to their **History / Notes** table:

- **Type:** Appointment
- **Category:** Opportunity / Internal
- **Note:** "Client Self-Scheduled: [Meeting Title] for [Date/Time] via Client Portal"
- **User:** Client / System

Record Escrow / Deposit

TMX Requirement: Record Escrow / Deposit (Batch Payment Clearing)

Overview

Re-architect the **Record Escrow / Deposit** page into a batch clearing interface (modeled after Rent Manager's "Make Deposit" workflow). This page allows the Account Manager to view un-deposited client payments, select/check off payments received via wire, ACH, check, or credit card, and commit them as a unified Escrow Holding Deposit.

1. Top Filters & Global Action Controls

- **Division / Department Filter:** Dropdown to isolate incoming payments by division (*All Selected, Modeling, Acting, Commercial, Agency Direct*).
- **Search Input:** Keyword search filtering across *Talent Name, Client Name, Reference/Check #, or Booking Title* ([Find a payment](#)).
- **Header Description Text:** "Select pending client payments and wire transfers to bundle into an Agency Escrow / Holding Account deposit."
- **Action Buttons (Top Right):**
 - **+ Record Deposit / Add Other Income:** Opens modal to manually log miscellaneous incoming funds directly into holding.
 - **Print Deposit Slip:** Generates a PDF summary statement of all selected items for accounting records.

2. Interactive Batch Selection Table (Data Grid)

- **Selection Checkboxes (☒ Column):** Individual row checkboxes allowing the Account Manager to check off payments currently hitting the bank account.
- **Table Columns:**
 - [Expand Arrow \(> \)](#): Click to view full payout breakdown (Agency Commission vs. Talent Net Escrow Share).
 - [Selection Box \(☒\)](#): Selects payment for deposit batching.
 - [Talent / Payee](#): Hyperlinked talent profile name.
 - [Client / Brand](#): Source of funds (e.g., *Nike, Ford, Sephora*).
 - [Date Received](#): Payment transaction date ([MM/DD/YY](#)).
 - [Payment Type / Check #](#): Payment method & reference code ([Wire](#), [ACH](#), [CC](#), [MO](#), [Check #](#)).
 - [Project / Booking](#): Linked job or campaign name (e.g., *\$10,000 Commercial Shoot*).
 - [Division](#): Department tag (*Commercial, Fashion, Legal*).
 - [Notes / Status](#): Memo details (e.g., *Talent share held in trust pending shoot wrap*).
 - [Amount](#): Total dollar value of the incoming transaction.

3. Real-Time Calculation Footer Bar

A fixed calculation bar at the bottom right that dynamically updates as checkboxes are selected:

- **Payments Selected:** Count of checked payment items (e.g., **Payments Selected: 11**).
- **Deposit Total:** Dynamic sum of all checked row amounts (e.g., **Deposit Total: \$5,425.96**).
- **Action Buttons:**
 - **Deposit Button (Blue):** Commits the checked items as a cleared batch deposit.
 - **Cancel Button:** Clears selections.

4. Automated Ledger & History Note Integration

Upon clicking **Deposit**:

- Moves selected payments from **Pending Escrow** to **Cleared Holding Account**.
- Writes an automatic entry to each linked talent/client profile **History / Notes** table:
 - **Type:** Financial
 - **Category:** Internal
 - **Note:** "Escrow Deposit Recorded: \$[Amount] received from [Client] for [Project]"
 - **User:** Account Manager Executing Deposit

The screenshot displays the 'Make Deposit' interface in the Rent Manager application. The interface includes a search bar, a table of payments, and a footer bar with a deposit total of \$5,425.96.

Tenant	Date	Check #	Property	Unit	Comment

Client Invoices

TMX Requirement: Client Invoices Master Hub & Itemized Editor

Overview

Re-architect the **Client Invoices** system into a unified two-part module: a high-density Master Invoice Ledger (main dashboard) and a wide, multi-box Itemized Invoice Editor (matching Rent Manager's grid layout). This replaces long vertical modal forms with a clean, horizontally structured billing interface.

1. Part 1: Master Invoice Dashboard (Ledger View)

- **Top Controls & Filter Bar:**
 - **Search Bar:** Keyword search box filtering across *Invoice #, Client, Talent Name, Project, or PO #*.
 - **Status Filter Dropdown:** Filter by *All, Draft, Sent, Paid, Overdue, Cancelled*.
 - **Date Range Pickers:** Filter invoices generated within specific date ranges.
 - **+ New Invoice Button (Top Right):** Opens the wide Itemized Invoice Editor modal.
- **Data Table Columns:**
 - **Invoice #:** Sequential invoice number (e.g., *INV-2026-001*).
 - **Client:** Hyperlinked client/brand name (e.g., *Nike, Sephora*).
 - **Tax ID:** Client corporate tax identification number.
 - **Talent:** Hyperlinked talent profile name (e.g., *Maya Rivera*).
 - **Project / Booking:** Linked job title (e.g., *\$10,000 Commercial Shoot*).
 - **Subtotal:** Base job total before tax.
 - **Tax:** Applied sales/service tax percentage & dollar amount.
 - **Total:** Final billed total (*Subtotal + Tax*).
 - **Due Date:** Billed payment due date timestamp.
 - **Doc:** Direct link icon to view/download generated DocHub or PDF invoice.
 - **Status Badge:** Color-coded state (*Sent* = Blue, *Paid* = Green, *Overdue* = Red).
 - **Actions:** **Edit** button (opens Itemized Editor) and 3-dot menu (⋮).

2. Part 2: Itemized Invoice Editor (Wide Modal / Page View)

Reconfigure the invoice creation/edit modal into three top metadata boxes and a bottom line-item breakdown table:

- **Top Section: Metadata Cards**
 - **Box 1: Recipient Information**
 - **Client / Tenant Search Dropdown:** Select corporate client or brand.

- **Talent Search Dropdown:** Link talent associated with the billing.
 - **From / To Display:** Auto-populates Nzinga Management address (*From*) and Client Billing Address on file (*To*).
- **Box 2: Invoice Details**
 - **Invoice Date:** Date picker (Defaults to today).
 - **Payment Terms:** Dropdown (*Due Immediately, Net 15, Net 30, Net Month, Due on 1st/15th/30th*).
 - **Due Date:** Auto-calculated based on terms, with manual override.
 - **Sales Rep / Account Manager:** Select staff member managing the account.
 - **Comments / Public Notes:** Memo area printed on the final client invoice.
- **Box 3: Tax & Attachments**
 - **Taxable Toggle Checkbox:** Toggles Tax Amount, Tax Type, and Tax % fields.
 - **Attachments Dropzone:** Upload PO documents, signed booking briefs, or receipts.
- **Bottom Section: Line-Itemization Table**
 - **Product / Service:** Dropdown (*Day Rate, Usage Buyout, Agency Fee, Fitting Fee, Overtime, Travel Reimbursement*).
 - **Quantity:** Decimal numeric field (e.g., *1.00*).
 - **Description:** Text box for line-item details (e.g., *Replacement of 2014-C Window or Social Cutdowns Usage Right*).
 - **Charge Type:** Category tag (*Booking, Damage, Expense, Rush Fee*).
 - **Rate:** Unit price currency input.
 - **Amount:** Calculated total (*Quantity × Rate*).
 - **+ Add Detail Button:** Adds a new itemized row.
- **Totals Bar & Action Buttons:**
 - Bottom calculation summary showing **Sub Total**, **Tax Amount**, **Total Amount**, **Amount Paid**, and **Balance Due**.
 - Action buttons: **Save & Close**, **Save & Send (DocHub/Email)**, **Print/PDF**, and **Cancel**.

3. Automated Ledger & History Note Integration

- **Automated Profile History Logging:** Generating, editing, or updating a client invoice automatically writes an entry to both the **Talent's** and **Client's** individual **History / Notes** ledger:
 - **Type:** Financial
 - **Category:** Internal
 - **Note:** "Invoice #[Invoice #] created for \$[Total Amount] - [Project Title]"
 - **User:** Account Manager Executing Action

Post Recurring Retainers

TMX Requirement: Post Recurring Retainers Engine

Overview

Re-architect the **Post Recurring Retainers** page into a batch execution dashboard modeled after Rent Manager's *Post Recurring Charges* setup. This module allows the Account Manager to automatically generate and post monthly, weekly, or custom retainer billing across active client accounts in bulk.

1. Left Card: Posting Parameters & Information

- **Post Date:** Date picker (Defaults to current date) establishing the posting transaction date.
- **Posting Period Options:**
 - **Use Due Day for Posting:** Checkbox aligning transaction dates with individual client agreement due dates.
 - **Post Zero-Dollar Retainers:** Checkbox to toggle whether waived/zero-balance accounts generate zero-dollar ledger entries.
- **Transaction Memo / Notes:** Text field to record a global memo applied to all generated retainer charges (e.g., *Monthly Management & Representation Retainer - September 2026*).

2. Right Card: Client Selection & Posting Frequency

- **Posting Frequency Selector:** Dropdown to select charge cycle (*Monthly, Weekly, Daily, Quarterly, Annual*).
- **Group / Division Filter:** Dropdown to filter active retainer plans by division (*Modeling, Acting, Commercial, Agency Corporate*).
- **Client Selection Table:** High-density checklist grid listing all accounts with active recurring retainer contracts:
 - **Select All Box (☑):** Master checkbox to select/deselect all active accounts.
 - **Client / Brand Name:** Hyperlinked corporate client or talent account name.
 - **Retainer Plan Description:** Brief plan summary (e.g., *\$2,500/mo Corporate Representation Retainer*).
 - **Last Posted Date:** Stamp showing the last time charges were posted for each account (MM/DD/YY).
 - **Amount:** Billed recurring retainer dollar value.

3. Execution Footer & Automated Ledger Logging

- **Footer Calculation Bar:** Fixed bottom bar displaying real-time metrics before posting:

- **Selected Accounts:** Count of checked accounts (e.g., 12 Client Accounts Selected).
- **Total Retainer Value:** Aggregate dollar sum of the batch (e.g., \$30,000.00).
- **Post Retainers Button (Blue):** Primary action button executing batch generation.
- **Automated Ledger & History Note Integration:** Clicking **Post Retainers** automatically creates corresponding pending invoices/charges and writes an entry to each client's **History / Notes** table:
 - **Type:** Financial
 - **Category:** Internal
 - **Note:** "Recurring Retainer Posted: \$[Amount] - [Frequency] Representation Plan"
 - **User:** Account Manager Executing Batch

Post Overdue Interest

Here are the two developer specifications: first, updating the **Post Overdue Interest & Fee Management** module to explicitly handle talent advances/debts alongside brand late fees, and second, creating the dedicated **Brand Management & Portal** hub.

TMX Requirement 1: Post Overdue Interest & Account Holds (Talent & Brand Support)

Overview

Re-architect the **Post Overdue Interest / Late Fees** engine to handle both **Brand Invoices** (late campaign/retainer payments) and **Talent Expense Balances** (unpaid advances, test shoots, travel, portfolio fees). This module enforces late penalties and automatically triggers portal feature locks across both account types.

1. Dual-Audience Delinquency Filtering

- **Account Type Switcher:** Radio toggle between **Brand / Client Accounts** and **Talent Accounts**.
- **Delinquency Criteria (Left Box):**
 - **Division Filter:** Dropdown (*Modeling, Acting, Commercial, Agency Corporate*).
 - **Balance Threshold:** Minimum balance required to trigger a fee (e.g., > \$0.00).
 - **Days Delinquent:** Range input (e.g., 30 to 999 Days Past Due).
 - **As Of Date:** Date picker (MM/DD/YYYY).

2. Penalty & Hold Rules Logic

- **Brand / Corporate Client Logic:**
 - **Fee Rule:** Applicable percentage (e.g., 1.5% per month) or flat fee against overdue campaign invoices.
 - **Brand Portal Hold:** Automatically displays a payment warning banner on the Brand Portal and blocks new booking confirmations until cleared.
- **Talent Account Logic (Models, Influencers, Athletes):**
 - **Fee Rule:** Flat contract penalty or agreed interest applied to unpaid agency advances/repayments.
 - **Talent Portal Lock:** Automatically disables **Escrow Withdrawals**, **Job Scheduling**, and **Portfolio Downloads** until repayment terms are met or auto-deducted from incoming booking payouts.

3. Delinquent Account Preview Grid & Execution

- **Table Columns:** Selection Box (☑), Account Name (Brand or Talent), Project / Reference ID, Original Balance, Days Overdue, Calculated Penalty, Action Context Menu (⋮).
- **Post Charges Button:** Applies penalties, logs individual notes to profile **History / Notes** ledgers, and updates portal status badges.

Brand Accounts

TMX Requirement 2: Brand Accounts & Simplified Brand Access Portal

Overview

Build a dedicated **Brands Management** directory in TMX for managing corporate client profiles (e.g., Nike, Sephora) along with a lightweight, secure **Brand Access Portal** where brand partners can view active campaigns, pay invoices, and execute contract sign-offs.

1. Internal TMX Brand Directory Page (/brands)

- **Search & Header Toolbar:** Keyword search box (*Find a brand...*), Division Filter, and a + **Add Brand Account** button.
- **Data Table Columns:**
 - **Brand Name & Logo:** Brand title with uploaded logo asset.
 - **Primary Contact:** Name, email, and phone number of the brand manager/rep.
 - **Active Projects:** Count of ongoing bookings/campaigns (e.g., *2 Active Shoots*).
 - **Open Balance:** Current unpaid invoice total.
 - **Portal Status:** Indicator badge (*Active Portal User, Pending Invitation, Account Hold*).
 - **Actions:** **View Profile, Send Portal Access, Edit.**

2. Simplified Brand Access Portal (Client View)

A clean, minimalist web portal interface designed specifically for corporate brand reps with three primary tabs:

- **Tab 1: Invoices & Payment Center (/portal/billing)**
 - Lists all open, paid, and overdue campaign invoices.
 - **Itemized Breakdown:** Displays subtotal, agency fee, and usage rights breakdown.
 - **One-Click Payment:** Direct "**Pay Invoice Now**" button supporting Credit Card, ACH, and Wire Transfer integration.
 - **Account Hold Banner:** If balance is past due, displays a prominent red warning banner restricting new booking requests until settled.
- **Tab 2: Contracts & Agreements (/portal/contracts)**
 - Embedded **DocHub / E-Sign Viewer** for reviewing and signing campaign briefs, talent usage agreements, and retainer contracts.
 - Direct download access to fully executed PDFs.
- **Tab 3: Campaign Schedules (/portal/campaigns)**
 - Read-only view of confirmed shoot dates, booked talent roster, and self-scheduling meeting links with assigned agents.

3. Automated System Integration

- **Auto-Escrow Clearing:** When a brand pays an invoice through the Brand Portal, TMX automatically routes funds to **Escrow Clearing**, splits agency commissions, and updates the assigned talent's payout ledger.
- **History Note Logging:** Portal logins, e-sign completions, and invoice payments automatically log entries to the Brand's **TMX History / Notes** table.

Please note AI made this image and not exactly how I want to look like but some perspective I guess. Please reach out if you are confused.

Batch Client Receipts

TMX Requirement: Batch Client Receipts & Payment Entry Engine

Overview

Re-architect the **Batch Client Receipts** module from a plain table list into a rapid, two-stage payment posting engine (modeled directly after Rent Manager's *Batch Payments* screen). This workflow allows the Account Manager to enter incoming client payments one by one into a staging table, auto-allocate funds across open invoices, and commit the entire batch in a single post.

1. Top Section: Single Payment Entry Bar

A persistent entry form at the top of the page for rapid data entry:

- **Division Filter Dropdown:** Select agency division (*All Selected, Modeling, Acting, Commercial*).
- **Client / Brand Search Bar (Search by Name or Account #):** Type-ahead search field to select the paying brand or talent account.
- **Date Picker:** Transaction payment date (Defaults to current date).
- **Reference Dropdown (Payment Method):** Dropdown menu options (*Check, Wire Transfer, ACH, CC, Cash, MO*).
- **Memo Field:** Optional text box for notes (e.g., *Check #4021 - Nike Fall Campaign*).
- **Amount Currency Field:** Dollar amount received.
- **Entry Action Buttons:**
 - **Edit Allocations Button:** Opens a modal to manually split a lump sum payment across multiple open invoices for that client.
 - **Add to Batch Button:** Adds the payment record into the pending staging grid below.
- **Settings Gear Button (⚙ Settings):** Opens the **Batch Payment Settings** modal:
 - **Default Payment To Full Amount Owed** (Checkbox): Auto-fills amount field with total outstanding balance when client is selected.
 - **Default Memo** (Text Field): Standard auto-populating memo text.
 - **Account Search Inclusions:** Checkboxes for *Past, Current, Future, Prospects*.

2. Main Section: Staging Grid & Data Table

Displays all payments currently staged in the active batch before committing to the general ledger:

- **Columns:**
 - **Client / Brand Name:** Hyperlinked paying entity.
 - **Division / Project:** Linked agency department or campaign.
 - **Payment Reference:** Method and check/transaction # (*Wire #90812, CC*).
 - **Outstanding Balance:** Total current open balance on account before this payment.
 - **Payment Staged:** Applied dollar amount for this batch item.
 - **Action Context Menu (⋮):** Allows row removal or re-allocation before posting.

3. Bottom Section: Batch Totals & Direct Clearing

- **Footer Summary Bar:** Real-time summary running calculations:
 - **Total Outstanding Balance:** Sum of balances across all staged client accounts.
 - **Total Payment Staged:** Aggregate dollar total of the active batch.
- **Direct Escrow Clearing Integration:**
 - **Make Deposit When Posting** Checkbox: Checking this box automatically routes the posted batch straight into cleared **Escrow Holding Deposits**, bypassing the extra step on the *Record Escrow/Deposit* screen.
- **Post Payments Button (Blue):** Commits all staged payments to account ledgers simultaneously.

4. Automated History Note & Portal Integration

Posting the batch automatically updates client account balances, lifts any active delinquency holds, and logs a note to the client's **History / Notes** ledger:

- **Type:** Financial
- **Category:** Internal
- **Note:** "Batch Receipt Applied: \$[Payment Amount] via [Method] ([Memo]) - Balance updated"
- **User:** Account Manager Executing Batch

Real-World Operational Example

1. **The Day's Mail/Wires Arrive:** Your Account Manager receives three payments in one afternoon: a \$10,150 wire from Nike, a \$4,500 check from Sephora, and a \$6,200 ACH from Ford.
2. **Rapid Staging:** Instead of navigating to three different client profiles:
 - Select **Nike** → Amount auto-fills \$10,150 → Click **Add to Batch**.
 - Select **Sephora** → Amount auto-fills \$4,500 → Click **Add to Batch**.
 - Select **Ford** → Amount auto-fills \$6,200 → Click **Add to Batch**.
3. **One-Click Post & Clear:** They check **Make Deposit When Posting** (sending funds straight into cleared escrow) and click **Post Payments**.
4. **Result:** In 10 seconds, all 3 client balances clear, invoices update to **Paid**, any portal holds unlock automatically, and history entries are stamped across all 3 accounts.

Manage Retainer Plans

TMX Requirement: Manage Retainer Plans & Bulk Modification Hub

Overview

Re-architect the **Manage Retainer Plans** page from a basic modal setup into a two-part system: a high-density Retainer Plan Directory (main dashboard) and a Bulk Retainer Modification Tool (modeled after Rent Manager's *Modify Recurring Charges* screen). This allows the Account Manager to set up new contracts, manage active plans, and adjust pricing across multiple client contracts simultaneously.

1. Part 1: Main Retainer Plans Directory (Dashboard View)

- **Top Controls & Filter Toolbar:**
 - **Search Bar:** Keyword search box filtering across *Client/Brand Name, Plan Description, or Agreement ID*.
 - **Division Filter:** Dropdown to isolate plans by department (*Modeling, Acting, Commercial, Agency Corporate*).
 - **Status Filter:** Select *All, Active, Paused, Expired*.
 - **Primary Action Buttons:**
 - **+ New Retainer Plan:** Opens the streamlined creation modal.
 - **Modify Retainer Plans (Bulk):** Opens the batch adjustment interface.
- **Master Data Table Architecture:**
 - **Client / Brand:** Hyperlinked corporate account name (e.g., *Nike, Sephora*).
 - **Division:** Department associated with the agreement.
 - **Current Retainer Amount:** Monthly/Recurring dollar value (e.g., *\$5,000.00*).
 - **Billing Cycle / Day:** Charge frequency and day of month (e.g., *Monthly on the 1st*).
 - **Contract Term:** Start date to end date (*MM/DD/YY to MM/DD/YY*).
 - **Description / Memo:** Brief memo detailing contract scope (e.g., *Exclusive Beauty Roster Retainer*).
 - **Active Status Badge:** Toggle switch or badge (**Active** = Green, **Paused** = Gray).
 - **Actions:** **Edit** button (opens modal) and 3-dot context menu (⋮).

2. Part 2: Bulk Retainer Modification Tool (Batch Editor)

Modeled after Rent Manager's batch modification screen, this interface allows the Account Manager to execute price updates, index adjustments, or global contract renewals across selected accounts at once:

- **Left Panel: Selection Filters**
 - **Division / Group:** Filter accounts to modify.
 - **Current Amount Range:** Isolate plans matching specific rates (e.g., plans **>= \$3,000.00**).
 - **Agreement End Date Window:** Filter contracts expiring within a date range.
 - **Add Changes to History Checkbox** (

- **New Amount / Increase Rate:** Currency field or percentage increase (e.g., + 5.0% or \$5,500.00).
- **New Comment / Memo:** Text box for update reason (e.g., *2027 Annual Contract Rate Adjustment*).
- **Effective Date:** Date picker setting when new billing rates take effect (*Begin using new charges on*).
- **Center Staging Grid:**
 - Displays a table of all matching retainer plans with checkboxes (☑).
 - Columns show **Client**, **Current Amount**, **Current Comment**, **New Amount (Preview)**, **New Comment (Preview)**, and **Contract End Date**.
- **Action Button:**
 - **Apply Modifications (Blue):** Updates all checked retainer contracts in a single click.

3. Part 3: Streamlined "New Retainer Plan" Modal

- **Client / Brand Search:** Select target brand account.
- **Division / Department:** Assign agency division.
- **Recurring Amount:** Monthly or flat fee input.
- **Billing Cycle & Day:** Frequency (*Monthly, Weekly, Quarterly*) and execution day.
- **Start Date & Expiration Date:** Contract duration window.
- **Description:** Public notes printed on recurring invoices.
- **Active Checkbox:** Defaults to checked.

4. Automated Ledger & History Note Integration

Any creation, edit, or batch modification of a retainer plan automatically writes an entry to the client's **TMX History / Notes** table:

- **Type:** Financial
- **Category:** Internal
- **Note:** "Retainer Plan Updated: Rate adjusted from \$[Old Amount] to \$[New Amount] effective [Date]"
- **User:** Account Manager Executing Action

Real-World Operational Example

1. Setting Up a New Retainer Plan:

- Sephora agrees to a **\$5,000/month** contract to keep 3 beauty models on call.
- You click **+ New Retainer Plan**, select **Sephora**, enter **\$5,000**, set **Bill Day: 1st of the Month**, and click **Create**. TMX will now automatically include Sephora every time you run *Post Recurring Retainers* on the 1st.

2. Doing an Annual Price Increase (Bulk Modification):

- It's the new year, and your agency increases all commercial brand retainers by **5%**.

- Instead of editing 40 brand accounts one by one, your Account Manager opens the **Bulk Retainer Modification Tool**.
- They select **Division: Commercial**, enter **New Rate: + 5%**, set **Effective Date: 01/01/2027**, check the boxes for all 40 brands, and click **Apply Modifications**.
- All 40 retainer plans instantly update, and audit notes are auto-stamped in every brand's TMX history ledger!

The screenshot shows the 'Modify Recurring Charges' interface in the Rent Manager application. The interface is divided into a sidebar on the left for filtering and a main table area on the right for viewing and modifying charges.

Filters (Left Sidebar):

- Properties:** <All Properties>
- Charge Type:** [Search field]
- Unit Type:** All
- User Defined Fields:** <Select UDF>
- Charges to include:** All selected
- Current Amount:** [Range selector]
- Lease date:** From [Calendar] To [Calendar]
- Month:** All
- Lease Start:** [Dropdown]
- Apply:** [Button]

Main Table Area:

At the top of the main area, there are input fields for 'New amount' (set to 'C'), 'New comment' (set to '[C]'), and a checkbox for 'Begin using new charges on' with a date of '09/02/2026'. Below these is a table with the following columns: Tenant, Property, Unit, Account, Current Comment, New Comment, Lease S..., Lease End, Current A..., and New Amount. The table is currently empty, and a message below the columns reads: 'Select filters and click apply to view recurring charges'.

At the bottom right of the interface is a 'Modify' button.

Log Expense / Payout

TMX Requirement: Log Expense / Payout & Payables Communication Architecture

Overview

Re-architect the **Log Expense / Payout** module into a high-density Accounts Payable engine modeled after Rent Manager's *Add Bill* interface. This page acts as the central hub for logging, approving, and releasing two types of agency payables: **Talent Payouts** (net escrow earnings) and **Vendor / Agency Expenses** (photographers, studios, travel, equipment).

1. Master Payables Dashboard (Ledger View)

- **Top Toolbar Controls:**
 - **Search Bar:** Keyword search filtering across *Payee, Talent, Vendor, Project Name, or Invoice #*.
 - **Category Filter Dropdown:** Filter by *All Payables, Talent Payouts, Vendor Bills, Travel/Test Shoot Expenses*.
 - **Status Filter Dropdown:** Filter by *Pending Clearing, Approved for Payment, Paid, On Hold*.
 - **Primary Action Buttons:**
 - **+ Log Expense / Bill:** Opens the structured entry modal.
 - **+ Process Talent Payout:** Direct shortcut to log net earnings releases from escrow.
- **Master Data Table Architecture:**
 - **Payable ID / Invoice #:** Unique system ID or external vendor bill number.
 - **Payee / Recipient:** Hyperlinked Talent Name, Influencer, or Vendor/Supplier.
 - **Client / Project:** Linked booking campaign or agency project (e.g., *Nike \$10,000 Commercial Shoot*).
 - **Bill / Post Date:** Timestamp when bill was received or logged (*MM/DD/YY*).
 - **Due Date:** Target payout execution date.
 - **Gross Amount:** Total campaign or bill amount before agency split.
 - **Agency Commission / Fee:** Auto-calculated agency cut (e.g., *20% = \$2,000*).
 - **Net Payable Amount:** Final payout dollar amount owed to talent or vendor (e.g., *\$8,000*).
 - **Status Badge:** Color-coded indicator (*Pending Escrow* = Orange, *Approved* = Blue, *Completed/Paid* = Green, *Hold Active* = Red).
 - **Actions:** **Edit** button and 3-dot context menu (⋮).

2. "Log Expense / Add Bill" Entry Modal

Reconfigure the entry modal into three high-density sections matching Rent Manager's layout:

- **Section 1: Bill & Payee Information (Top Left Box)**
 - **Payee / Talent / Vendor Search:** Search field to select talent profile or vendor account.
 - **Amount:** Currency input field.
 - **Payment Terms:** Dropdown (*Due Immediately, Net 15, Net 30*).

- **Bill Date / Post Date / Due Date:** Date pickers setting accounting timestamps.
- **Vendor Invoice #:** Text field for vendor invoice numbers.
- **Memo / Description:** Text area detailing expense scope.
- **Section 2: Payment Details & Attachments (Top Right Box)**
 - **Default Payout Account:** Dropdown selecting agency operational bank account or escrow holding account.
 - **Payment Method:** Dropdown (*ACH Direct Deposit, Wire Transfer, Check, Credit Card*).
 - **Attachments Upload Area:** Drag-and-drop zone to attach vendor receipts, booking briefs, or talent agreements.
 - **Linked Project / Booking:** Search input linking the expense to an active campaign.
- **Section 3: Line-Item Allocation Table (Bottom Section)**
 - **Project / Booking:** Linked campaign name.
 - **Category / Charge Type:** Select charge category (*Talent Net Share, Studio Rental, Photographer Fee, Travel Reimbursement*).
 - **Gross Amount:** Base campaign value.
 - **Agency Split (%):** Commission deduction percentage.
 - **Allocated Amount:** Net amount assigned to this line item.
 - **+ Add Allocation Line:** Button to split payouts across multiple projects, vendors, or talent.

3. Cross-Module Communication Architecture

The Payables engine connects bidirectionally across six TMX modules to automate checks and balances:

- **1. Talent Profile & Portal Integration**
 - **Data Sent:** Updates the talent's financial ledger and portal view (**Held in Escrow** $\rightarrow$ **Pending Payout** $\rightarrow$ **Paid**).
 - **Data Checked:** Verifies active **Financial Holds** or unpaid expense advances (test shoots, travel, portfolio fees) and automatically deducts debt balances before releasing net funds.
- **2. Record Escrow / Deposit (Receivables Integration)**
 - **Data Checked:** Verifies that brand funds (e.g., Nike's wire) have officially cleared and hit the agency holding account before allowing payout approval.
- **3. Universal History / Notes Ledger Integration**
 - **Data Sent:** Auto-stamps timestamped audit entries upon creation, approval, edit, or payout completion:
 - *Type:* Financial
 - *Category:* Internal
 - *Note:* "Payable Logged: \$[Net Amount] owed to [Payee] for [Project/Memo] - Due [Due Date]"
 - *User:* Account Manager Executing Action
- **4. Vendor Directory & Directory Accounts**

- **Data Sent/Checked:** Pulls direct deposit (ACH) info, mailing addresses, and W-9 tax forms for vendors, updating running account balances upon payment release.
- **5. Central Dashboard (Staff Agenda & Alerts)**
 - **Data Sent:** Pushes automated alert notifications to the Account Manager's dashboard for **Overdue Bills**, **Pending Payout Approvals**, or **Unprocessed Expenses**.
- **6. Client / Brand Portal Integration**
 - **Data Checked:** Verifies that the corporate client has not filed an active contract dispute or payment hold before releasing funds to talent tied to that campaign.

The screenshot shows the 'Add Bill' form in the Rent Manager application. The form is divided into two main sections: 'Bill Information' and 'Payment & Attachments'.

Bill Information:

- Tenant:** A search field with a magnifying glass icon.
- Amount:** A text field containing '0.00' with a refresh icon.
- Terms:** A dropdown menu.
- Bill Date:** A date field showing '09/02/2026' with a calendar icon.
- Invoice #:** A text field.
- Post Date:** A date field showing '09/02/2026' with a calendar icon.
- Due Date:** A date field showing '09/02/2026' with a calendar icon.
- Memo:** A large text area for additional notes.

Payment & Attachments:

- Default Bank:** A dropdown menu showing '< None >'.
- Payment Method:** A dropdown menu showing 'Check'.
- Attachments:** A section with an 'Upload' button and a 'Paste' button.
- Links:** Two text fields labeled 'Purchase Order' and 'Work Order Items'.

At the bottom of the form, there are four buttons: 'Save & New', 'Save & Close', 'Save', and 'Cancel'.

The browser's address bar shows the URL: `tcg.rmx.rentmanager.com/#/welcome/myworkspace`. The browser tabs include 'How To Add A...', 'Nzinga Talent C...', 'TMX History C...', 'Invoices', 'My Workspace', 'Updates pt2...', 'TMX Software', and 'Ask Gemini'.

Brands Directory - Updated pt2

TMX Requirement: Brands Directory & Client Ledger Engine

Overview

Re-architect the **Brands Page** into a high-density, high-data Directory Grid (modeled directly after Rent Manager's *Vendors* list view). This page serves as the master database for corporate clients, brand partners, and billing contacts, providing immediate scannability of contact details, payment terms, and open balance statuses.

1. Top Control Bar & Global Filters

- **Bulk Actions Dropdown (Blue):** Bulk operations menu (*Send Portal Invitations, Export CSV/PDF, Apply Global Payment Terms, Send Mass Communication*).
- **Search Input (Find a brand...):** Real-time keyword search filtering across *Brand Name, Contact Name, City, Email, or Account ID*.
- **Saved Filters Dropdown:** Quick-access saved views (*All Active Brands, Delinquent Accounts, High-Volume Partners, Inactive Brands*).
- **Show Inactive Toggle Checkbox:** Displays archived or inactive brand profiles.
- **+ Add Brand Button (Top Right):** Opens slide-out drawer to onboard a new corporate partner.

2. High-Density Brands Data Grid

A compact, multi-column table displaying corporate contact and billing data:

- **Table Columns:**
 - **Name:** Hyperlinked brand/company title (e.g., *Nike, Sephora, Ford*).
 - **Primary Contact:** Key marketing or billing representative on file.
 - **Street Address:** Billing street address.
 - **City / State / Postal Code:** Geographic location fields.
 - **Phone Number:** Direct contact line.
 - **Email:** Billing/contact email address (hyperlinked to trigger native email composer).
 - **Terms:** Assigned billing terms (*Net 15, Net 30, Due on Receipt, Custom Retainer*).
 - **Pay Method:** Preferred payment clearing method (*ACH, Wire Transfer, Credit Card, Check*).
 - **Open Balance:** Current unpaid invoice amount (highlighted in red if past due).
 - **Portal Status:** Access badge (*Active, Pending Invite, Hold Active*).
 - **Column Menu Control (| | | |):** Customizer icon allowing staff to reorder or hide specific data columns.

- **Actions (⋮):** Context menu to open profile, launch Brand Portal view, edit details, or record payment.

3. Automated Ledger & Profile Slide-Out Drawer

Clicking any brand row opens a right-hand slide-out drawer containing:

- **Brand Profile Overview:** Company details, tax ID, and active booking campaign list.
- **Financial Ledger:** Complete running record of generated invoices, cleared escrow deposits, and applied late fees.
- **History / Notes Table:** Universal activity feed showing automated email/SMS logs, signed DocHub agreements, and payment events.

Name	Street	City	State	Postal Code	Phone Number	Email	Terms	Pay Method	Address

Disbursements & Payout

TMX Requirement: Disbursements & Payout Execution Hub

Overview

Re-architect the **Disbursements / Payouts** module into a high-density payment execution register modeled after Rent Manager's *Checks Register*. This page tracks all outgoing financial distributions (talent payouts, vendor payments, agency commission transfers) and allows staff to batch-process ACH direct deposits or print paper checks.

1. Part 1: Main Disbursement Register (Dashboard View)

- **Top Control & Filter Toolbar:**
 - **Search Bar:** Keyword search box filtering across *Payee, Reference #, Bank Account, or Project*.
 - **Bank Account Selector:** Dropdown to filter disbursements by source account (*Agency Escrow Account, Operating Account, Payroll Account*).
 - **Payment Method Filter:** Select *All Methods, ACH Direct Deposit, Wire Transfer, Paper Check, Cash*.
 - **Date Range Pickers:** Filter executed or scheduled distributions by date window.
 - **+ New Disbursement Button:** Opens the manual payment generation modal.
- **Master Register Data Columns:**
 - **Reference # / Check #:** Unique payment tracking number or printed check number (e.g., *ACH-98214* or *CHK-1004*).
 - **Source Bank:** Agency account paying out the funds (*Escrow Holding vs Operating*).
 - **Payee:** Hyperlinked Talent Name, Influencer, or Vendor/Supplier.
 - **Project / Booking:** Linked job campaign (e.g., *Nike \$10,000 Commercial Shoot*).
 - **Date Paid:** Execution timestamp (*MM/DD/YYYY*).
 - **Method:** Distribution type (*ACH, Wire, Check*).
 - **Amount:** Final dollar amount disbursed.
 - **Status Badge:** Indicator state (*Pending Processing* = Yellow, *Cleared/Sent* = Green, *Voided* = Red).
 - **Actions:** **View Receipt/Stip, Void Payment, Print Check/PDF.**

2. Part 2: "New Disbursement" Execution Modal

- **Payee Selection Dropdown:** Search and select talent or vendor on file.
- **Source Bank Account:** Select paying account (*Escrow Holding Account*).
- **Payment Method Selector:** Dropdown (*Direct Deposit / ACH, Wire, Physical Check*).
- **Amount:** Dollar sum being distributed (Auto-populated from approved payables).
- **Linked Project / Bill:** Select the approved payable bill clearing this transaction.

- **Execution Status:** Toggle between **Pending** and **Executed**.
- **Paid At Date/Time Picker:** Timestamp stamp for bank reconciliation.

3. Automated Ledger & System Communications

Executing a disbursement automatically updates your entire financial ecosystem:

- **Escrow Balance Adjustment:** Instantly reduces the active balance in your Escrow Holding Ledger.
- **Talent Portal View:** Updates the talent's portal payout status to **Paid** and generates a downloadable **Payout Slip / Remittance Advice**.
- **History Note Logging:** Automatically writes an entry to the payee's **History / Notes** table:
 - *Type:* Financial
 - *Category:* Internal
 - *Note:* "Disbursement Executed: \$[Amount] sent via [Method] (Ref #[Reference #]) for [Project]"
 - *User:* Account Manager Executing Action

Real-World Operational Example

1. **The Setup:** You previously approved an **\$8,000 net payout** for Maya Rivera on the *Log Expense* page. Now it's Friday (Pay Day).
2. **Executing the Payout:** Your Account Manager opens **Disbursements / Payouts**, clicks **+ New Disbursement**, selects **Maya Rivera**, and picks **ACH Direct Deposit**.
3. **The Result:**
 - TMX assigns transaction ID **ACH-2026-8812**.
 - Maya receives an automated push notification and email: *"Your payout of \$8,000.00 for the Nike Commercial Shoot has been deposited!"*
 - Her portal status changes from **Pending** to **Paid**, and your agency escrow account balance automatically decreases by \$8,000.

Issue Talent Payouts (Payday Processing Engine)

TMX Requirement: Issue Talent Payouts (Payday Processing Engine)

Overview

Re-architect the **Issue Talent Payouts** screen into a multi-bank, high-density payday processing terminal. This module bridges approved payables with bank execution, allowing staff to review cleared escrow funds, select payment disbursement methods, and execute batch talent payouts.

1. Top Section: Bank & Execution Controls

- **Source Bank Account:** Dropdown (*Escrow Holding Account, Agency Operational Account*). Displays live account cash balance.
- **Payment Date:** Date picker (Defaults to current date).
- **Payment Type Toggle:** Select default payout mode (*ACH Direct Deposit, Print Check, Bank Wire*).
- **Reference / Check Starting Number:** Auto-incrementing check or transaction number field (e.g., **CHK-1005** or **ACH-BATCH-0902**).

2. Main Section: Approved Payout Staging Table

Replaces the basic TMX table with a multi-item allocation grid matching Rent Manager's itemized view:

- **Table Columns:**
 - **Selection Checkbox** (

3. Top-Right Section: Attachments & Check Controls

- **Check Will Be Printed Checkbox:** Toggles PDF print queue generation.

- **Attachments Box:** Upload bank confirmation slips, signed talent vouchers, or w-9 tax documents.
- **Memo Field:** Standard note line printed on payout stubs (e.g., *Payout for Nike Fall Campaign Shoot*).

4. Execution Footer & System Integration

- **Footer Totals Bar:** Displays **Selected Talent Count | Total Disbursement Value**.
- **Action Buttons:** **Execute Selected Payouts (Green)**, **Save & Close**, **Cancel**.
- **Automated System Flow:**
 - **Portal Update:** Sets talent portal payout state to **Paid** and attaches a downloadable **Pay Stub PDF**.
 - **Escrow Reconcile:** Deducts executed amount from the active escrow ledger.
 - **History Note:** Logs an entry to the talent profile: *"Payout Executed: \$[Amount] via [Method] Ref #[Ref #]"*.

Real-World Example: How It Works on Payday

1. **Reviewing Funds:** Your Account Manager opens **Issue Talent Payouts**. The screen displays Maya Rivera's cleared **\$8,000** net payout for the Nike Shoot.
2. **Choosing Disbursement Mode:**
 - If paying via **Direct Deposit:** They select **ACH**, leave the starting reference ID, check Maya's box, and click **Execute Selected Payouts**. Money moves automatically via your ACH processor.
 - If paying via **Physical Check:** They check **Check will be printed**, put check paper in the printer, and click **Execute Selected Payouts**. TMX prints a formal check with line-item breakdown stubs attached.
3. **The Result:** Maya's portal updates to **Paid**, the \$8,000 clears out of escrow, and an audit trail is stamped in TMX history.

Roles and Permissions

TMX Developer Spec: Open Workspace & Universal Edit Access

Objective

Simplify [/admin/roles](#) by granting **full view, edit, and execution access across all modules** to all 4 active team roles (**Director**, **Success Manager**, **Account Manager**, and **Scouting Agent**). The only page restricted to executive level is Admin Director Control Settings ([/admin/roles](#) and [/admin/users](#)).

1. Universal Module & Pipeline Access

For **Director**, **Success Manager**, **Account Manager**, and **Scouting Agent**, check **EVERY** box across all sections:

- **Pipeline Stages:** Check all stages ([New / Lead](#), [More Information Required](#), [Client Packet Review](#), [Success Manager Validation](#), [Contract Pending](#), [Director Review](#), [Active Client](#), [Archived](#), [Declined](#)).
- **Capabilities:** Check all capabilities ([submit_client_packet](#), [send_application](#), [track_own_submissions](#), [approve_client_packet](#), [return_packet](#), [publish_contract](#)).
- **Modules:** Check every single module box:
 - [prospects](#), [applications](#), [pipeline](#), [send-email](#), [messaging](#), [support-tickets](#), [appointments](#), [calendar](#), [agency-tasks](#), [new-ticket](#).
 - [clients](#), [renewal-offers](#), [client-invoices](#), [retainer-plans](#), [vendors](#).
 - [escrow-deposit](#), [post-retainers](#), [batch-receipts](#), [log-expense](#), [disbursements](#), [issue-payouts](#), [overdue-interest](#).
 - All reporting modules ([report-applicant-pool](#), [report-escrow-balances](#), [report-ar-aging](#), [report-gross-bookings](#), etc.).

2. The Only Locked Guardrail (Admin Settings)

- **[admin_access](#) Capability:** Checked ONLY for **Director**.
- **Admin Routes ([/admin/roles](#), [/admin/users](#)):** Hidden and restricted exclusively to the **Director** system role.

This gives your team total freedom to collaborate, edit contracts, log expenses, and move clients through the pipeline without hitting annoying permission walls, while keeping system administration locked safely with you.

Scenario: Handling a \$10,000 Nike Booking

- **1. The Scouting Agent (Jordan):**
 - **What Jordan sees:** Full access to every page, including **Batch Client Receipts** and **Issue Talent Payouts**.
 - **What Jordan actually does:** Enters Nike's initial information into the **Pipeline**, compiles Maya's **Client Packet**, and submits it.
 - **The Verbal Guideline:** Jordan stays focused on scouting and client qualification. Though Jordan can view the financial ledger to confirm Nike's payment cleared, Jordan leaves payout execution alone because it isn't part of the scouting workflow.
- **2. The Success Manager (Alexis):**
 - **What Alexis sees:** Full access across all modules, pipeline stages, and contract tools.
 - **What Alexis actually does:** Reviews Maya's packet, prepares the representation agreement, and sends it to the client.
 - **The Verbal Guideline:** Alexis manages onboarding and client health. Alexis can check the **Log Expense / Payout** page to answer a quick billing question for Maya, but leaves the actual bank transfers to the Account Manager.
- **3. The Account Manager (Devon):**
 - **What Devon sees:** Full access to the entire platform.
 - **What Devon actually does:** Logs into **Batch Receipts** when Nike's payment arrives, posts the deposit to escrow, verifies Maya's net share on **Log Expense**, and clicks **Execute Payout** on payday.
 - **The Verbal Guideline:** Devon owns financial operations. Devon can jump over to the **Prospects** page to view lead notes, but doesn't alter discovery files or scouting statuses.
- **4. The Director (Simone):**
 - **What Simone sees:** Full access to every page, plus exclusive access to the **Admin Role Management (/admin/roles)** page.
 - **What Simone actually does:** Countersigns contracts, reviews departmental performance, and manages system user accounts.

Why This Setup Works

- **Zero Software Friction:** Nobody gets blocked by "Access Denied" popups when trying to grab information or help a teammate out.
- **Complete Transparency:** Every role can track a client's journey end-to-end, from lead intake to final payday payout.
- **Clean System Protection:** The only route locked behind a password is the Admin settings page (**/admin/roles**), preventing accidental changes to system permissions.

Team Users - How it looks

TMX Developer Spec: Team Users Management Overhaul (/admin/users)

Objective

Redesign the **Team Users** directory into a polished, high-density user management hub. This update removes deprecated system roles, fixes role color badges, and adds an inline quick-edit drawer for managing staff accounts.

1. Header Toolbar & Quick Stats

- **Header Controls:**
 - **Title:** **Team Members** (Subtext: *Manage agency accounts, role assignments, and platform access*).
 - **Search Input** (**Search user name or email...**): Real-time text search filter.
 - **Role Filter Dropdown:** Filter by *All Roles, Director, Success Manager, Account Manager, Scouting Agent*.
 - **Primary Action Buttons:**
 - **Role Management (Link/Button):** Direct link navigating to </admin/roles>.
 - **+ Invite Team Member (Blue Button):** Triggers the user invitation modal.
- **Top Metric Badges (4 Quick Summary Cards):**
 - **Total Active Users** | **Directors (3)** | **Success Managers (1)** | **Account Managers (1)** | **Scouting Agents (3)**

2. Modernized User Table Architecture

- **Table Columns:**
 - **User:** Avatar initials circle alongside Full Legal Name (Hyperlinked to user activity profile).
 - **Email:** Clickable email string (<mailto:> trigger).
 - **System Role:** Updated badge mapping restricted strictly to the 4 active roles:
 - **Director** (Purple Badge)
 - **Success Manager** (Blue Badge)
 - **Account Manager** (Green Badge)
 - **Scouting Agent** (Orange Badge)
 - *(Note: Remove deprecated badges for Ops Specialist and Team Leads).*
 - **Job Title:** Internal title string (e.g., *CEO, Senior Scout, Head of Accounting*).
 - **Status:** Toggle/Pill indicator (**Active** = Solid Green, **Inactive/Suspended** = Gray).
 - **Last Active:** Auto-timestamp showing recent login (e.g., *2 hours ago*).
 - **Actions:** **Quick Edit** button and a 3-dot context menu (⋮) containing *Edit User, Change Password, Deactivate Account*.

3. User Quick-Edit Slide-Out Drawer

Clicking **Edit** on any user row slides out a right-side drawer to update staff credentials on the fly without refreshing the page:

- **Basic Info:** First Name, Last Name, Email, Phone Number.

- **Role Assignment Dropdown:** Reassign role (Director, Success Manager, Account Manager, Scouting Agent).
- **Job Title Field:** Free-text job title.
- **Account Status Switch:** Active / Inactive toggle button.
- **Action Buttons:** Save Changes and Cancel.

4. User Database Cleanup Tasks

- **Database Re-mapping:** Reassign existing test accounts currently tagged as Ops Specialist or Team Lead to their correct active roles (Director, Success Manager, Account Manager, or Scouting Agent).
- **Soft Deletion:** Allow the Director to archive or deactivate users while maintaining their historical action logs on client records and payment entries.

System Settings - How it looks

Here is the complete developer specification to overhaul your **System Settings** page (/admin/settings) into a clean, modern, tabbed admin panel.

TMX Developer Spec: System Settings Overhaul (/admin/settings)

Objective

Transform the **System Settings** screen from two raw tables into a tabbed, card-based configuration panel. This replaces exposed technical key-value pairs with clean form fields, modern toggle switches, and structured agency configuration controls.

1. Page Header & Layout Architecture

- **Title:** **System Settings** (Subtext: *Manage global agency configurations, company codes, and application defaults*).
- **Tabbed Navigation Bar:**
 - **Tab 1:** **Company Codes** (Active)
 - **Tab 2:** **General Application Settings**
 - **Tab 3:** **Email & Notification Defaults**
 - **Tab 4:** **Financial Defaults**

2. Section Specifications

Tab 1: Company & Division Codes

Re-architect the raw "Company Codes" table into a clean card view with modern status badges:

- **Top Action Bar:**
 - Inline creation form: Text input (Enter new code e.g., NZG) + **Add Code** button.
- **Data Table Grid:**
 - **Company Code:** Bold code string (NZG, NZINGA, TCG).
 - **Division Name:** Friendly descriptive label (e.g., *Nzinga Group, Agency Corporate*).
 - **Status Badge:** Pill indicator (Active = Solid Green, Disabled = Gray).
 - **Actions:** Toggle switch for Active/Inactive and a Delete button.

Tab 2: General Application Settings

Replaces the unformatted "Application Settings" key list with a clean form layout:

- **App Identity Card:**
 - **Application Name** Input: Text box for platform branding (e.g., *Nzinga Talent OS*).
 - **Demo / Sandbox Mode** Toggle: Modern toggle switch (ON / OFF) replacing `demo_mode = false`.
- **System Defaults Card:**
 - **Default Currency:** Dropdown (*USD (\$)*).
 - **Timezone:** Dropdown (*Eastern Time (US & Canada)*).

- **Default Contract Execution Window:** Number input setting auto-expiry for sent contracts (Defaults to **72 Hours** per SOP).

Tab 3: Email & Notification Defaults

Dedicated form section for outgoing agency communications:

- **Sender Name:** Text box for outgoing email branding (e.g., **Nzinga Talent Group**).
- **Default Reply-To Email:** Email input (e.g., **info@nzinga.co**).
- **Automated Portal Reminders:** Toggle switch to auto-notify clients/talent of pending signatures or overdue invoices.

Tab 4: Financial Defaults

- **Default Agency Commission Rate:** Percentage input (Defaults to **20%**).
- **Payment Due Terms:** Default billing window for brand invoices (*Net 15, Net 30*).
- **Default Escrow Clearing Account:** Bank selection dropdown.

3. Save Controls & Feedback

- **Sticky Save Footer:** Persistent action bar at the bottom of the page when changes are made:
 - **Save Changes (Blue Button) | Discard Changes (Gray Button).**
- **Toast Notification:** Triggers a green confirmation toast: *"System settings updated successfully."*

Global Header Nav Overhaul

TMX Developer Spec: Global Header Nav Overhaul & Text Messaging Icon

Objective

Re-architect the top navigation bar ([GlobalHeader.jsx](#)) to mimic Rent Manager's compact layout. This update integrates a dedicated **Text Messaging Center phone icon** with dynamic unread notification badges, aligns center command navigation, and modernizes the user profile area.

1. Left Section: Branding & Quick Actions

- **Nzinga Agency Logo:** TMX logo aligned left ([/assets/logo.svg](#)).
- **Quick Nav Icons (Grouped Buttons):**
 - **Main Menu Toggle** (): Expand/collapse global sidebar.
 - **Recent Pages / History Sheet** (): Opens quick dropdown showing last 5 visited screens.
 - **Favorites Star** (): Bookmarks the active screen to user preferences.

2. Center Section: Command Launch Search Bar

- **Search Bar Input:** Dark translucent fill with **Command Launch — people, apps, pages** placeholder.
- **Global Keyboard Shortcut:** Binds  + **K** or **Ctrl + K** to immediately focus search.
- **Typeahead Results:** Auto-suggests matches across *Talent Profiles, Brand Accounts, Agency Modules, and Settings Pages*.

3. Right Section: Notifications, Messaging & User Menu

- **Company Code Display:** **COMPANY: NZG** stacked text indicator.
- **Notifications Bell** (): Red badge counter showing unread system alerts.
- **NEW: Text Messaging Center Phone Icon** ( / **Phone Graphic**):
 - **Click Action:** Direct link navigating to [/messaging](#) (Text Messaging Center).
 - **Unread Notification Badge:** Dynamic orange/red badge dot or numeric pill overlaying the icon when an inbound SMS/text is received from a talent or client.
 - **Real-time WebSockets Trigger:** Listens for incoming SMS webhooks and updates the badge instantly without requiring a page refresh.
- **Role Switcher Dropdown:** Shows active role (e.g., **Director – Simone Nzinga**).
- **User Profile Initial Circle:** Avatar badge (e.g., **EB / SN**) opening profile settings and sign-out menu.

4. Sub-Header Page Banner (Blue Bar)

- **Dynamic Page Title:** Displays current route title (*My Workspace, Text Messaging Center, Batch Client Receipts, System Settings*).
- **Right-Aligned Header Controls:**
 - **History Clock Icon** (): Opens recent activity logs for that module.
 - **Refresh Icon** (): Reloads active page state.
 - **Help Icon** (): Opens TMX documentation drawer.

TMX University Training Hub

Here is the developer specification to transform that dead button into a full **TMX University** training hub route ([/academy](#) or [/university](#)), complete with role-based training modules directly aligned with your SOP.

TMX Developer Spec: TMX University Training Hub ([/university](#))

Overview

Connect the footer/workspace **TMX Academy / My Training** trigger button to a dedicated full-page Learning Management System (LMS) dashboard ([/university](#)). This module hosts interactive video/text training courses, auto-tracks staff completion progress, and enforces mandatory onboarding modules based on the user's role.

1. Header Navigation Trigger & Route

- **Trigger Binding:** Map the bottom-right footer link ( [TMX Academy](#) or [My Training](#)) to perform a client-side route navigation directly to [/university](#) (instead of opening a floating widget).
- **Page Header:** [TMX University](#) (Subtext: *Master agency operations, compliance, and platform workflows*).

2. Top Overview & Progress Header Cards

- **Overall Completion Progress Bar:** Shows total percentage of assigned courses completed (e.g., [Progress: 45%](#)).
- **Role-Specific Learning Path Badge:** Displays active training track matching user system role (*Scouting Path, Success Path, Account Management Path, Executive Path*).
- **Quick Metrics:** [Assigned Courses](#) | [In Progress](#) | [Completed](#) | [Certificates Earned](#).

3. Course Catalog & Filter Controls

- **Search Bar:** Keyword search ([Search assigned content...](#)).
- **Show Completed Toggle:** Switch to view or hide finished courses.
- **Category Filters:**
 - [Required Onboarding](#) (SOP Compliance & Security)
 - [Scouting & Qualification](#) (For Scouting Agents)
 - [Contracts & Lifecycle](#) (For Success Managers)
 - [Financial & Accounting](#) (For Account Managers)
- **Sort Dropdown:** Sort by *Assigned Date, Progress (%)*, *Course Title*.

4. Course Card Architecture & Curriculum

Each course card renders as a clean container matching your Rent Manager screenshot:

- **Card Elements:**
 - **Course Title:** Hyperlinked lesson title (e.g., *Mastering Batch Client Receipts, SOP: Scouting Agent Authority Boundaries*).
 - **Badge Tag:** Course difficulty or role tag ([Scouting](#), [Financial](#), [Compliance](#)).
 - **Progress Bar:** Visual completion indicator ([Progress: 0%](#) to [100%](#)).

- **Estimated Time:** Duration tag (e.g., *15 mins*).
- **Action Button:** **Start Course** or **Continue**.

Core Course Modules Pre-Loaded into System Database:

1. **Module 101: TMX System Foundations & Open Workspace Navigation** (All Roles)
2. **Module 102: Client Qualification & Packet Development** (Scouting Agents)
3. **Module 103: Quality Assurance, Contract Delivery & Onboarding** (Success Managers)
4. **Module 104: Receivables, Escrow & Batch Payments Engine** (Account Managers)
5. **Module 105: Payables, Talent Payouts & Disbursements** (Account Managers)
6. **Module 106: SOP Compliance, Data Protection & Authority Boundaries** (All Roles)

5. Interactive Lesson Viewer Modal / Page

Clicking a course opens the interactive player:

- **Left Sidebar:** Lesson index / video list with completion checkboxes.
- **Main Content Area:** Embedded video lesson, step-by-step documentation, or interactive quiz.
- **Completion Trigger:** Automatically updates the user's progress bar in the database upon finishing a video or passing a quiz.
- **History Stamp:** Automatically stamps a note on the user profile upon completing mandatory courses:
Type: System
Note: "User completed course: Module 104 - Receivables & Batch Payments Engine"

*** Please make sure that Directors are able to upload modules and stuff if they choose to.***

RentManager UNIVERSITY

Roster Performance Scorecard

Here is the complete, standalone developer specification for **Report #1: Roster Performance Scorecard (/report-roster-scorecard)**, built using the exact RMX Report Launcher layout.

TMX Developer Spec: Report #1 — Roster Performance Scorecard (/report-roster-scorecard)

Objective

Re-architect [/report-roster-scorecard](#) to match the Rent Manager Express (RMX) two-step reporting model (*Parameter Launcher Screen* $\rightarrow$ *Live Data Grid / PDF Export*). This report serves as the agency's primary performance roll, tracking active talent, campaign bookings, gross revenue generated, and assigned account ownership.

1. Top Parameter Control Panel (RMX Launcher Form)

Before data is generated, the user configures specific parameters using a structured input panel:

- **Divisions to Include (Replaces RMX "Properties to Include"):**
 - Multi-select dropdown (*All Selected, Commercial, Editorial, Acting, Influencer*).
 - Checkbox: [Include Inactive / Archived Roster](#).
- **Date Range:**
 - Start Date ([MM/DD/YYYY](#)) and End Date ([MM/DD/YYYY](#)) pickers.
 - Presets dropdown (*This Week, This Month, Quarter-to-Date, Year-to-Date*).
- **Staff / Manager Assignment:**
 - Dropdown (*All Managers, Alexis Grant, etc.*) to filter by assigned Success Manager.
- **Inclusions & Grouping Options:**
 - Checkbox: [Run Divisions Separately](#).
 - Checkbox: [Exclude Zero-Earnings Talent](#).
- **Sort Options:**
 - Dropdown (*Talent Last Name, First Name, Gross Revenue, Assigned Manager, Availability Status*).

2. Persistent Bottom Action Bar (RMX Footer Layout)

Anchored at the bottom right of the launcher panel:

- **Label:** [Generate as:](#)
- **Action Buttons:**
 - **[PDF]** (Generates formatted printable PDF report)
 - **[Excel]** (Downloads [.xlsx](#) spreadsheet)
 - **[PDF & Excel]** (Primary export action)
 - **[Run Live View]** (Renders interactive data grid on-screen)

3. Live Data View Output (Triggered via "Run Live View")

When the user clicks **Run Live View**, the parameter panel collapses into a clean top bar, rendering the following view:

Top KPI Summary Cards:

- **Active Roster Count** (Total active talent in selected divisions).
- **Gross Paid Bookings (\$)** (Total campaign dollars billed to corporate brands).
- **Agency Commission Cut (\$)** (Calculated 20% agency revenue yield).
- **Talent Net Share (\$)** (Calculated 80% net payouts earned across talent).

High-Density Data Grid Columns:

- **Talent Name** (Hyperlinked to talent profile drawer).
- **Division / Niches** (Pill badges: *Commercial*, *Editorial*).
- **Assigned Success Manager** (Staff tag: *Alexis Grant*).
- **Availability Status** (Pill badge: **Available** = Green, **Booked** = Blue, **On Hold** = Yellow).
- **Active Campaign** (Linked project title e.g., *Nike \$10k Commercial Shoot*).
- **Booked Dates** (Specific date window e.g., *Sep 10 – Sep 12, 2026* — replaces empty dashes -).
- **Gross Bookings (\$)** (Total campaign dollars generated by this talent in selected range).
- **Agency Cut (\$)** (20% commission yield).

4. Workflow & KPI Submission Guidelines

- **Usage:** Serves as the master roster audit sheet for tracking revenue performance and talent booking dates.
- **Daily EOD Check:** Success Managers verify active booking dates and availability statuses every weekday at **5:00 PM EDT**.
- **Friday KPI Submission:** Every **Friday at 4:00 PM EDT**, the **Success Manager** runs this report for *This Week*, clicks **Generate as: PDF**, and submits it to the Director to account for active roster activations and revenue generated.

Applicant Pool & Pipeline Log

TMX Developer Spec: Report #2 — Applicant Pool & Pipeline Log (/report-applicant-pool)

Objective

Re-architect /report-applicant-pool into a two-step reporting interface (*Parameter Launcher Screen* → *Live Data Grid / PDF Export*) modeled directly after RMX's *Prospect Waiting List*. This report serves as the agency's primary intake engine, tracking top-of-funnel talent leads, Scouting Agent productivity, and pipeline conversion speed.

1. Top Parameter Control Panel (RMX Launcher Form)

Before generating data, the user configures intake parameters using a structured launcher grid:

- **Divisions to Include (Replaces RMX "Properties to Include"):**
 - Multi-select dropdown (*All Selected, Commercial, Editorial, Acting, Influencer*).
 - Checkbox: *Include Inactive / Archived Leads*.
- **Date Range / As of Date:**
 - Start Date (*MM/DD/YYYY*) and End Date (*MM/DD/YYYY*) pickers.
 - Presets dropdown (*Today, This Week, This Month, Year-to-Date*).
- **Pipeline Stage Filters:**
 - Multi-select dropdown (*All Stages, New Lead, Discovery Call, Packet Review, Declined*).
- **Assigned Scouting Agent:**
 - Dropdown (*All Scouts, Jordan Hayes, etc.*) to filter by assigned Scout.
- **Close Rate Exclusions (Replaces RMX Application Exclusions):**
 - Checkbox: *Exclude Rejected / Declined Applications from Close Rate*.
 - Checkbox: *Run Divisions Separately*.
- **Sort Options:**
 - Dropdown (*Application Date, Applicant Last Name, Pipeline Stage, Assigned Scout*).

2. Persistent Bottom Action Bar (RMX Footer Layout)

Anchored at the bottom right of the launcher panel:

- **Label:** *Generate as:*
- **Action Buttons:**
 - **[PDF]** (Generates formatted printable PDF intake log)
 - **[Excel]** (Downloads *.xlsx* spreadsheet)
 - **[PDF & Excel]** (Primary export action)
 - **[Run Live View]** (Renders interactive high-density data grid)

3. Live Data View Output (Triggered via "Run Live View")

When the user clicks **Run Live View**, the parameter panel collapses into a top bar, rendering the formatted table and KPIs:

Top KPI Summary Cards:

- **Total Leads Received** (Total inquiries in selected date window).
- **Discovery Calls Completed** (Leads screened via phone/video).
- **Client Packets Submitted** (Files handed off to Success Manager).
- **Scout Conversion Rate (%)** (Percentage of total leads converted to packets).

High-Density Data Grid Columns:

- **Date Applied:** Timestamp (MM/DD/YYYY).
- **Applicant Name:** Full legal name.
- **Assigned Scout:** Scouting Agent handling the lead.
- **Target Division:** Intended representation division (*Modeling, Acting, Commercial*).
- **Pipeline Stage:** Color pill badge (**New Lead** = Gray, **Discovery Call** = Yellow, **Packet Review** = Blue, **Declined** = Red).
- **Last Contact Date:** Auto-timestamp of most recent outreach.
- **Discovery Notes Summary:** Truncated call notes with a click-to-expand slide-out drawer.

4. Workflow & KPI Submission Guidelines

- **Usage:** Tracks top-of-funnel lead velocity and measures Scouting Agent intake productivity.
- **Daily EOD Check:** Scouting Agents verify all lead notes and contact timestamps are updated every weekday at **5:00 PM EDT**.
- **Friday KPI Submission:** Every **Friday at 4:00 PM EDT**, each **Scouting Agent** runs this report filtered to **Assigned Scout = Myself** and **Date Range = This Week**, clicks **Generate as: PDF**, and submits it to the Director to account for their weekly lead conversion numbers.

Escrow & Deposit Balances

TMX Developer Spec: Report #3 — Escrow & Deposit Balances ([/report-escrow-balances](#))

Objective

Re-architect [/report-escrow-balances](#) into a two-step reporting interface (*Parameter Launcher Screen* $\rightarrow$ *Live Data Grid / PDF Export*) modeled directly after RMX's *Security Deposit Activity*. This report serves as the agency's primary financial holding ledger, tracking corporate brand payments in escrow, cleared funds, and net talent disbursements awaiting release.

1. Top Parameter Control Panel (RMX Launcher Form)

Before generating data, the user configures financial parameters using a structured launcher grid:

- **Divisions to Include (Replaces RMX "Properties to Include"):**
 - Multi-select dropdown (*All Selected, Commercial, Editorial, Acting, Influencer*).
 - Checkbox: [Include Inactive / Archived Talent Accounts](#).
- **Date Range:**
 - Start Date ([MM/DD/YYYY](#)) and End Date ([MM/DD/YYYY](#)) pickers.
 - Presets dropdown (*Today, This Week, This Month, Year-to-Date*).
- **Talent Status Filter (Replaces RMX "Tenants to Include"):**
 - Multi-select dropdown (*Current / Active, Past / Archived, Future / Pending Onboarding*).
- **Deposit Types to Include:**
 - Multi-select dropdown (*Client Escrow Holding, Talent Expense Retainers, Advance Deposits*).
- **Zero Amount Exclusions:**
 - Dropdown (*None, Hide Zero Balances, Activity Only, Balance Only*).
- **Assigned Account Manager:**
 - Dropdown (*All Account Managers, Devon Cruz, etc.*).
- **Sort Options:**
 - Dropdown (*Talent Last Name, First Name, Client / Brand Name, Deposit Date, Account Number*).

2. Persistent Bottom Action Bar (RMX Footer Layout)

Anchored at the bottom right of the launcher panel:

- **Label:** [Generate as:](#)
- **Action Buttons:**
 - [PDF] (Generates formatted printable PDF escrow audit ledger)
 - [Excel] (Downloads [.xlsx](#) spreadsheet)
 - [PDF & Excel] (Primary export action)
 - [Run Live View] (Renders interactive high-density data grid)

3. Live Data View Output (Triggered via "Run Live View")

When the user clicks **Run Live View**, the parameter panel collapses into a top bar, rendering the formatted table and financial KPIs:

Top KPI Summary Cards:

- **Total Escrow Funds Held (\$)** (Grand total of client campaign money in holding).
- **Cleared & Ready for Payout (\$)** (Funds cleared by bank, ready for payday execution).
- **Pending Bank Clearing (\$)** (Wire/check deposits waiting on standard bank clearing windows).

High-Density Data Grid Columns:

- **Talent Name**: Full legal name (Hyperlinked to financial ledger drawer).
- **Client / Brand Name**: Corporate entity paying for the campaign (e.g., *Nike*).
- **Project / Booking Title**: Linked campaign title (e.g., *\$10,000 Commercial Shoot*).
- **Assigned Account Manager**: Staff member overseeing financial processing.
- **Gross Deposit Amount (\$)**: Total payment received into escrow (\$10,000).
- **Agency Commission Cut (\$)**: Auto-calculated 20% agency cut (\$2,000).
- **Net Talent Share (\$)**: Calculated 80% net payable (\$8,000).
- **Deposit Date**: Date payment hit the escrow bank account.
- **Escrow Status Badge**: Color pill badge (**Pending Clearing** = Yellow, **Cleared - Ready** = Green, **Disbursed** = Gray).

4. Workflow & KPI Submission Guidelines

- **Usage**: Acts as the primary financial safeguard ensuring no talent payout is executed until originating corporate brand funds have officially cleared.
- **Daily EOD Check**: The Account Manager verifies incoming brand wire receipts and updates bank clearing statuses every weekday at **5:00 PM EDT**.
- **Friday KPI Submission**: Every **Friday at 4:00 PM EDT**, the **Account Manager** runs this report filtered to **Date Range = This Week**, clicks **Generate as: PDF**, and submits it to the Director to verify cleared escrow totals and confirm payday readiness.

Onboarding & Offboarding

TMX Developer Spec: Report #4 — Onboarding & Offboarding (/report-onboarding)

Objective

Re-architect /report-onboarding into a two-step reporting interface (*Parameter Launcher Screen* → *Live Data Grid / PDF Export*) modeled directly after RMX's *Move In / Move Out* report. This report tracks contract delivery timelines, enforces the agency's **72-hour signature rule**, manages division handoffs, and audits offboarding reconciliations.

1. Top Parameter Control Panel (RMX Launcher Form)

Before generating data, the user configures lifecycle parameters using a structured launcher grid:

- **Divisions to Include (Replaces RMX "Properties to Include"):**
 - Multi-select dropdown (*All Selected, Commercial, Editorial, Acting, Influencer*).
 - Checkbox: *Include Inactive / Archived Roster*.
- **Date Range:**
 - Start Date (*MM/DD/YYYY*) and End Date (*MM/DD/YYYY*) pickers.
 - Presets dropdown (*This Week, This Month, Quarter-to-Date, Year-to-Date*).
- **Lifecycle Activity Filter (Replaces RMX "Move In / Move Out" Toggles):**
 - Dropdown: *All Activity, Onboarding (New Signings), Renewals Pending, Offboarding (Departures)*.
- **Assigned Success Manager:**
 - Dropdown (*All Managers, Alexis Grant, etc.*) to filter by assigned lifecycle admin.
- **Inclusions & Sort Options:**
 - Checkbox: *Include Expected / Pending Execution Dates*.
 - Checkbox: *Restrict to 72-Hour Window Expired Only*.
 - Sort Options Dropdown (*Talent Last Name, First Name, Contract Delivery Date, Expiry Countdown, Status*).

2. Persistent Bottom Action Bar (RMX Footer Layout)

Anchored at the bottom right of the launcher panel:

- **Label:** *Generate as:*
- **Action Buttons:**
 - [PDF] (Generates formatted printable lifecycle audit report)
 - [Excel] (Downloads *.xlsx* spreadsheet)
 - [PDF & Excel] (Primary export action)
 - [Run Live View] (Renders interactive high-density data grid)

3. Live Data View Output (Triggered via "Run Live View")

When the user clicks **Run Live View**, the parameter panel collapses into a top bar, rendering the formatted table and KPIs:

Top KPI Summary Cards:

- **Active Onboarding Files** (Talent currently undergoing quality review or contract signing).
- **Pending Signatures (72h Window)** (Contracts out for signature awaiting client execution).
- **Completed Activations** (Talent fully onboarded and handed off to assigned divisions).
- **Offboarded / Archived** (Finalized departures fully reconciled).

High-Density Data Grid Columns:

- **Talent Name:** Full legal name (Hyperlinked to client profile drawer).
- **Activity Type:** Classification badge (**New Onboarding**, **Renewal Pending**, **Offboarded**).
- **Assigned Success Manager:** Staff member executing onboarding/offboarding.
- **Contract Delivered Date:** Timestamp when contract was delivered via DocHub/Portal.
- **72-Hour Expiry Window:** Countdown timer / status badge (**48h Remaining** = Green, **24h Remaining** = Yellow, **Expired** = Red).
- **Division Handoff:** Target division (*Commercial*, *Editorial*).
- **Lifecycle Status Badge:** Color pill badge (**Awaiting Signature**, **Director Review**, **Active Client**, **Archived**).

4. Workflow & KPI Submission Guidelines

- **Usage:** Monitors onboarding turn-around times and ensures contracts are executed within the required 72-hour window before executive activation.
- **Daily EOD Check:** The Success Manager verifies contract delivery timelines and follows up on expiring agreements every weekday at **5:00 PM EDT**.
- **Friday KPI Submission:** Every **Friday at 4:00 PM EDT**, the **Success Manager** runs this report filtered to **Date Range = This Week**, clicks **Generate as: PDF**, and submits it to the Director to account for onboarding velocity and signed client activations.

Roster Openings & Availability

TMX Developer Spec: Report #5 — Roster Openings & Availability (/report-roster-openings)

Objective

Re-architect /report-roster-openings into a two-step reporting interface (*Parameter Launcher Screen* → *Live Data Grid / PDF Export*) modeled directly after RMX's *Unit Availability Listing*. This report acts as the agency's primary inventory board, tracking active talent availability, division capacity gaps, and open booking windows across the roster.

1. Top Parameter Control Panel (RMX Launcher Form)

Before generating inventory data, the user configures parameters using a structured launcher grid:

- **Divisions to Include (Replaces RMX "Properties to Include"):**
 - Multi-select dropdown (*All Selected, Commercial, Editorial, Acting, Influencer*).
 - Checkbox: *Include Inactive / Benched Roster*.
- **As of Date / Booking Window:**
 - Target Date picker (*MM/DD/YYYY*) to check future availability.
 - Presets dropdown (*Available Today, Next 7 Days, Next 30 Days, Next Quarter*).
- **Availability Status Filter:**
 - Multi-select dropdown (*Open for Booking, Fully Booked, On Hold / Optioned, Medical / Leave*).
- **Niche / Special Skill Filter:**
 - Multi-select dropdown (*Runway, Beauty, Fitness, Commercial Print, Voiceover*).
- **Assigned Manager Filter:**
 - Dropdown (*All Managers, Alexis Grant, etc.*) to filter by assigned Success Manager.
- **Sort Options:**
 - Dropdown (*Talent Last Name, First Name, Division, Next Available Date, Status*).

2. Persistent Bottom Action Bar (RMX Footer Layout)

Anchored at the bottom right of the launcher panel:

- **Label:** *Generate as:*
- **Action Buttons:**
 - [PDF] (Generates formatted printable roster availability list)
 - [Excel] (Downloads *.xlsx* spreadsheet)
 - [PDF & Excel] (Primary export action)
 - [Run Live View] (Renders interactive high-density data grid)

3. Live Data View Output (Triggered via "Run Live View")

When the user clicks **Run Live View**, the parameter panel collapses into a top bar, rendering the formatted table and inventory KPIs:

Top KPI Summary Cards:

- **Total Active Roster** (Total signed talent across selected divisions).
- **Open for Bookings** (Talent available for immediate client placement).
- **Currently Booked** (Talent assigned to active client shoots/campaigns).
- **Division Capacity Gap** (Highlighted niches requiring new scouting acquisition).

High-Density Data Grid Columns:

- **Talent Name**: Full legal name (Hyperlinked to talent profile drawer).
- **Division / Niches**: Pill badges (*Commercial, Editorial, Fitness*).
- **Assigned Success Manager**: Staff manager tag.
- **Current Booking Status**: Color pill badge (**Open** = Green, **Booked** = Red, **Optioned Hold** = Yellow).
- **Current Campaign / Client**: Active project title (e.g., *Nike Commercial Shoot*).
- **Next Available Date**: Specific calendar date when talent is free for new bookings.
- **Booking Hold Notes**: Truncated notes regarding client option holds or travel restrictions.

4. Workflow & KPI Submission Guidelines

- **Usage**: Used by Scouting Agents to identify roster recruitment needs and by Success Managers to pitch available talent to brand clients.
- **Daily EOD Check**: Success Managers update talent availability calendars and option holds every weekday at **5:00 PM EDT**.
- **Friday KPI Submission**: Every **Friday at 4:00 PM EDT**, the **Success Manager** runs this report for the upcoming 30-day window, clicks **Generate as: PDF**, and submits it to the Director to highlight current roster capacity and scout recruitment targets.

Pending Talent Payouts (AP Aging)

TMX Developer Spec: Pending Talent Payouts (AP Aging)

(/report-pending-payouts)

Objective

Re-architect /report-pending-payouts into a two-step RMX launcher interface (*Parameter Launcher Screen* $\rightarrow$ *Live Data Grid / PDF Export*). This report tracks queued talent disbursements, categorizes payout aging buckets, and verifies bank account clearing status prior to payout execution.

1. Top Parameter Control Panel (RMX Launcher Form)

Before generating payables data, the user configures parameters using a structured launcher grid:

- **Divisions to Include (Replaces RMX "Properties to Include"):**
 - Multi-select dropdown (*All Selected, Commercial, Editorial, Acting, Influencer*).
 - Checkbox: *Include Inactive / Archived Talent*.
- **As of Date & Date Restriction:**
 - As of Date picker (*MM/DD/YYYY*).
 - Date Restriction On dropdown (*Due Date, Invoice Date, Deposit Clearing Date*).
- **Detail or Summary Mode (Matching RMX):**
 - Dropdown: *Detail (Itemized per booking)* vs *Summary (Total owed per talent)*.
 - Checkbox: *Show Credits / Retainer Deductions*.
- **Aging Buckets Filter:**
 - Dropdown (*All Open Payables, Current (0-15 Days), 16-30 Days, 31-60 Days, 60+ Days Overdue*).
- **Bank Balance Summary Options (Matching RMX):**
 - Checkbox: *Show Escrow Bank Balance Summary*.
 - Checkbox: *Selected Division Balances Only*.
- **Sort Options:**
 - Dropdown (*Talent Last Name, First Name, Due Date, Amount Owed, Aging Days*).

2. Persistent Bottom Action Bar (RMX Footer Layout)

Anchored at the bottom right of the launcher panel:

- **Label:** *Generate as:*
- **Action Buttons:**
 - [PDF] (Generates formatted AP aging report for payroll reconciliation)
 - [Excel] (Downloads .xlsx spreadsheet)
 - [PDF & Excel] (Primary export action)
 - [Run Live View] (Renders interactive high-density data grid)

3. Live Data View Output (Triggered via "Run Live View")

When the user clicks **Run Live View**, the parameter panel collapses into a top bar, rendering the formatted table and payables KPIs:

Top KPI Summary Cards:

- **Total Pending Payouts (\$)** (Grand total net funds queued for talent).
- **Cleared Escrow Funds (\$)** (Total funds cleared by bank, ready for instant payout release).
- **Uncleared / Pending Bank Hold (\$)** (Funds held awaiting bank settlement).

High-Density Data Grid Columns:

- **Talent Name:** Full legal name (Hyperlinked to payment ledger).
- **Project / Booking Title:** Linked client campaign (e.g., *\$10,000 Commercial Shoot*).
- **Gross Booking Amount (\$):** Invoice total (\$10,000).
- **Net Amount Owed (\$):** Talent's 80% share (\$8,000).
- **Date Logged:** Timestamp when deposit was logged (MM/DD/YYYY).
- **AP Aging:** Days queued (e.g., 19d).
- **Escrow Bank Status:** Badge (**Bank Cleared** = Green, **Pending Hold** = Yellow).
- **Action Control:** [**Approve / Execute Payout**] button (Restricted to Account Manager / Director execution rights, though viewable by all).

4. Workflow & KPI Submission Guidelines

- **Usage:** Acts as the primary Accounts Payable ledger to manage cash flow and schedule Friday payday batches.
- **Daily EOD Check:** The Account Manager verifies cleared deposits against aging payouts every weekday at **5:00 PM EDT**.
- **Friday KPI Submission:** Every **Friday at 4:00 PM EDT**, the **Account Manager** runs this report for **Date Restriction = Due Date**, clicks **Generate as: PDF**, and submits it to the Director to authorize the weekly talent payout batch.

Gross Bookings & Commission

TMX Developer Spec: Report #1 — Gross Bookings & Commission Summary

Objective

Re-architect [/report-gross-bookings](#) into a two-step RMX launcher interface (*Parameter Launcher Screen* $\rightarrow$ *Live Data Grid / PDF Export*). This screen serves as the agency's primary revenue scorecard, automatically calculating the **20% agency commission yield** and **80% net talent share** across all corporate brand campaign invoices.

1. Top Parameter Control Panel (RMX Launcher Form)

Before rendering data, the user configures financial parameters using a structured launcher grid:

- **Divisions to Include (Replaces RMX "Properties to Include"):**
 - Multi-select dropdown (*All Selected, Commercial, Editorial, Acting, Influencer*).
 - Checkbox: [Include Inactive / Archived Client Accounts](#).
- **Date Range:**
 - Start Date ([MM/DD/YYYY](#)) and End Date ([MM/DD/YYYY](#)) pickers.
 - Presets dropdown (*This Month, This Quarter, Year-to-Date, Custom Range*).
- **Client / Brand Filter:**
 - Dropdown (*All Corporate Brands, Nike, Adidas, etc.*).
- **Commission Status Filter:**
 - Dropdown (*All Bookings, Commission Logged, Pending Entry*).
- **Sort Options:**
 - Dropdown (*Client Name, Project Name, Invoice Amount, Commission Cut*).

2. Persistent Bottom Action Bar (RMX Footer Layout)

Anchored at the bottom right of the launcher panel:

- **Label:** [Generate as:](#)
- **Action Buttons:**
 - **[PDF]** (Generates formatted printable revenue summary)
 - **[Excel]** (Downloads [.xlsx](#) spreadsheet)
 - **[PDF & Excel]** (Primary export action)
 - **[Run Live View]** (Renders interactive high-density data grid)

3. Live Data View Output (Triggered via "Run Live View")

When the user clicks **Run Live View**, the parameter panel collapses into a top bar, rendering the formatted table and revenue KPIs:

Top KPI Summary Cards:

- [Gross Bookings \(\\$\)](#) (Grand total billed to corporate brand clients across selected window).

- **Agency Commission (\$)** (Auto-calculates total 20% agency revenue retained — fixes current UI calculation bug!).
- **Net Talent Share (\$)** (Auto-calculates total 80% net payouts earned across talent roster).

High-Density Data Grid Columns:

- **Client / Brand:** Corporate client entity (e.g., *Nike*).
- **Project Title:** Linked campaign name (e.g., *\$10,000 Commercial Shoot*).
- **Invoice Total (\$):** Gross billed invoice amount (\$10,000).
- **Agency Commission (\$):** Auto-calculated 20% agency cut (\$2,000 — replaces empty dashes -).
- **Talent Share (\$):** Auto-calculated 80% net share (\$8,000).
- **Payment Status Badge:** Color pill badge (*Invoiced* = Blue, *Deposit Received* = Yellow, *Fully Cleared* = Green).

4. Workflow & KPI Submission Guidelines

- **Usage:** Master scorecard used by management to audit total agency gross revenue and commission yields.
- **Daily EOD Check:** Account Manager verifies new campaign invoices and commission logs every weekday at **5:00 PM EDT**.
- **Friday KPI Submission:** Every **Friday at 4:00 PM EDT**, the **Account Manager** runs this report for **Date Range = This Week**, clicks **Generate as: PDF**, and submits it to the Director to audit weekly revenue velocity.

Aged Client Invoices

TMX Developer Spec: Report #2 — Aged Client Invoices (AR Aging)

Objective

Re-architect [/report-ar-aging](#) into a two-step RMX launcher interface (*Parameter Launcher Screen* $\rightarrow$ *Live Data Grid / PDF Export*). This report acts as the agency's unpaid bill tracker, categorizing outstanding corporate brand invoices into time buckets (aging) so the Account Manager can follow up on late payments.

1. Top Parameter Control Panel (RMX Launcher Form)

Before rendering accounts receivable data, the user configures aging parameters using a structured launcher grid:

- **Divisions to Include (Replaces RMX "Properties to Include"):**
 - Multi-select dropdown (*All Selected, Commercial, Editorial, Acting, Influencer*).
 - Checkbox: [Include Inactive / Archived Client Accounts](#).
- **As of Date:**
 - Target Date picker ([MM/DD/YYYY](#)).
- **Aging Buckets Filter:**
 - Dropdown (*All Open Receivables, Current (0–30 Days), 31–60 Days, 61–90 Days, 90+ Days Past Due*).
- **Assigned Account Manager:**
 - Dropdown (*All Account Managers, Devon Cruz, etc.*) to filter by assigned billing admin.
- **Detail or Summary Mode (Matching RMX):**
 - Dropdown: *Detail (Itemized Invoices per Brand)* vs *Summary (Total Owed per Brand)*.
- **Sort Options:**
 - Dropdown (*Client Name, Due Date, Amount Owed, Aging Days*).

2. Persistent Bottom Action Bar (RMX Footer Layout)

Anchored at the bottom right of the launcher panel:

- **Label:** [Generate as:](#)
- **Action Buttons:**
 - **[PDF]** (Generates formatted printable AR aging ledger)
 - **[Excel]** (Downloads [.xlsx](#) spreadsheet)
 - **[PDF & Excel]** (Primary export action)
 - **[Run Live View]** (Renders interactive high-density data grid)

3. Live Data View Output (Triggered via "Run Live View")

When the user clicks **Run Live View**, the parameter panel collapses into a top bar, rendering the formatted table and aging KPIs:

Top KPI Summary Cards:

- **Total Open AR (\$)** (Grand total of all unpaid brand invoices).
- **Current AR (0–30 Days) (\$)** (Standard pending invoices within agreed payment terms).
- **Overdue AR (30+ Days) (\$)** (Late payments requiring collection outreach).

High-Density Data Grid Columns:

- **Client / Brand:** Full legal name (Hyperlinked to client billing ledger).
- **Invoice # / Campaign:** Linked invoice title (e.g., *Spring Lookbook Day Rate*).
- **Due Date:** Agreed payment deadline (MM/DD/YYYY).
- **Invoice Total (\$):** Gross billed amount (\$4,500).
- **AR Aging Days:** Auto-calculated days past due (e.g., **12 Days Late** — replaces empty status).
- **Aging Status Badge:** Color pill badge (**Current / Sent** = Blue, **Overdue** = Orange, **Delinquent** = Red).
- **Accrued Late Interest (\$):** Auto-calculated late fee charges (\$0 or accrued penalty).

4. Workflow & KPI Submission Guidelines

- **Usage:** Used to track outstanding brand debt and prioritize daily payment collection calls.
- **Daily EOD Check:** The Account Manager checks incoming wire payments against AR aging every weekday at **5:00 PM EDT**.
- **Friday KPI Submission:** Every **Friday at 4:00 PM EDT**, the **Account Manager** runs this report for **As of Date = Today**, clicks **Generate as: PDF**, and submits it to the Director to account for open brand balances and collection efforts.

Overdue Client Accounts

TMX Developer Spec: Report #3 — Overdue Client Accounts

Objective

Re-architect [/report-overdue-accounts](#) into a two-step RMX launcher interface (*Parameter Launcher Screen* $\rightarrow$ *Live Data Grid / PDF Export*). This report serves as the agency's "Red Flag" collection board, singling out severely delinquent brand accounts to trigger auto-posted late fees, automated collection notices, or legal booking holds.

1. Top Parameter Control Panel (RMX Launcher Form)

Before rendering delinquent account data, the user configures parameters using a structured launcher grid:

- **Divisions to Include (Replaces RMX "Properties to Include"):**
 - Multi-select dropdown (*All Selected, Commercial, Editorial, Acting, Influencer*).
 - Checkbox: [Include Inactive / Archived Accounts](#).
- **Grace Period Threshold:**
 - Dropdown (*Grace Period Expired (15+ Days Past Due), 30+ Days, 60+ Days, 90+ Days Severely Delinquent*).
- **Late Fee & Penalty Options (Matching RMX):**
 - Checkbox: [Include Auto-Posted Overdue Interest](#).
 - Checkbox: [Show Resolved / Paid Delinquency History](#).
- **Collection Action Status Filter:**
 - Dropdown (*All Overdue, Pending Collection Outreach, Final Warning Sent, Legal Hold*).
- **Sort Options:**
 - Dropdown (*Days Past Due, Client Name, Total Owed Amount, Last Notice Sent Date*).

2. Persistent Bottom Action Bar (RMX Footer Layout)

Anchored at the bottom right of the launcher panel:

- **Label:** [Generate as:](#)
- **Action Buttons:**
 - [PDF] (Generates formatted printable delinquent account summary)
 - [Excel] (Downloads [.xlsx](#) spreadsheet)
 - [PDF & Excel] (Primary export action)
 - [Run Live View] (Renders interactive high-density data grid)

3. Live Data View Output (Triggered via "Run Live View")

When the user clicks **Run Live View**, the parameter panel collapses into a top bar, rendering the formatted table and delinquent account KPIs:

Top KPI Summary Cards:

- [Total Delinquent Balance \(\\$\)](#) (Grand total of severely overdue corporate brand debt).

- **Delinquent Accounts Count** (Total number of brand accounts on payment hold).
- **Accrued Late Fees Billed (\$)** (Total auto-calculated late interest charged across accounts).

High-Density Data Grid Columns:

- **Delinquent Client:** Corporate entity name (Hyperlinked to client account file).
- **Overdue Projects:** List of unpaid campaign shoots (e.g., *Nike \$10,000 Commercial Shoot*).
- **Original Due Date:** Agreed payment deadline (MM/DD/YYYY).
- **Days Past Due:** Color pill badge (**18 Days Late** = Orange, **45+ Days Late** = Red).
- **Base Amount (\$):** Original invoice total (\$10,000).
- **Total Past Due (\$):** Base invoice total + accrued late fees/interest (\$10,500).
- **Last Payment Notice Sent:** Auto-timestamp of most recent email/SMS reminder.
- **Actions Control:** Quick buttons [**Post Overdue Interest**] / [**Send Collection Notice**] / [**Place Booking Hold**].

4. Workflow & KPI Submission Guidelines

- **Usage:** Used by leadership and accounting to freeze active talent bookings for non-paying clients and collect overdue agency revenue.
- **Daily EOD Check:** The Account Manager audits overdue accounts and logs outreach notes every weekday at **5:00 PM EDT**.
- **Friday KPI Submission:** Every **Friday at 4:00 PM EDT**, the **Account Manager** runs this report, clicks **Generate as: PDF**, and submits it to the Director to review non-paying accounts before placing corporate clients on booking holds.

After Application Submitted

Reminder of what the “Review Application” button should trigger

TMX Developer Spec: Prospect Application → Scout Qualification Workflow

Objective

Build the TMX workflow that begins immediately after a prospect submits an application.

Once an application is submitted, the assigned Scouting Agent must have a structured workspace that guides them through the required qualification process. The Scout is responsible for reviewing the application, completing the Jordan Score, conducting the Discovery Call, initiating the Security / Safety Screening, reviewing the returned screening status, completing the final vetting review, and then submitting the completed Client Packet to the Success Manager.

The Scout should **not** be able to skip required steps or submit an incomplete application.

Required Workflow

Application Submitted → Scout Reviews Application → Jordan Score → Discovery Call → Security / Safety Screening → Screening Returned → Final Scout Review → Client Packet Complete → Submit to Success Manager

1. APPLICATION SUBMITTED

When a prospect submits an application:

- TMX creates/updates the Prospect record.
- Prospect is placed in the appropriate Scout queue.
- A Scouting Agent is assigned.
- Prospect status becomes **Prospect / Application Submitted**.
- The Scout receives the application in their assigned application queue.
- The Scout can open the prospect and access the **Application Screening Workspace**.

The Scout should immediately see the prospect's submitted application and the required steps they must complete.

2. SCOUT OPENS APPLICATION

When the Scout opens the application, TMX should display a dedicated screening workspace rather than simply displaying the application form.

At the top of the workspace, display a progress tracker:

Screening Step	Status
Application Review	Not Started / Complete
Jordan Score	Not Started / Complete
Discovery Call	Not Started / Complete
Security / Safety Screening	Not Started / Pending / In Progress / Complete / Review Required
Final Scout Review	Not Started / Complete
Client Packet	Incomplete / Ready
Submit to Success Manager	Locked / Available

This becomes the Scout's working checklist for the prospect.

SCOUT ACTION 1: REVIEW THE APPLICATION

The Scout begins by reviewing everything the prospect submitted.

The Scout should be able to review:

- Personal/application information
- Contact information
- Date of birth/age information
- Talent niche(s)
- Professional experience
- Portfolio/media
- Resume/bio
- Social media links
- Website links
- Previous representation
- Career information
- Application responses
- Any uploaded documents
- Any additional information collected through the application

The Scout is looking for completeness, professionalism, potential, inconsistencies, and overall fit.

TMX should provide a place for the Scout to record internal observations.

Required TMX Action

[MARK APPLICATION REVIEW COMPLETE]

The Scout should not be able to mark the review complete if required review fields have not been addressed.

SCOUT ACTION 2: COMPLETE JORDAN SCORE

After reviewing the application, the Scout completes the **Jordan Score**.

The Jordan Score should be built directly into the Scout's screening workspace.

The Scout must:

- Review each required scoring category.
- Enter the applicable score.
- Provide supporting observations.
- Review the calculated overall score.
- Save the completed evaluation.

TMX should automatically calculate the overall Jordan Score.

Required TMX Action

[COMPLETE JORDAN SCORE]

The system should prevent this stage from being completed while required score fields are missing.

The completed Jordan Score becomes part of the prospect's Client Packet and screening history.

SCOUT ACTION 3: CONDUCT DISCOVERY CALL

After completing the Jordan Score, the Scout conducts the Discovery Call.

TMX should provide a dedicated Discovery Call area within the application.

The Scout should be able to:

- Schedule the Discovery Call.
- View the scheduled date/time.
- Access the required Discovery Call questions/prompts.
- Record notes during/after the call.
- Record relevant observations.
- Record the completed date/time.
- Mark the call as completed.

The Scout should document the prospect's:

- Career goals
- Professional background
- Current projects
- Previous representation
- Availability
- Experience
- Commitment
- Professionalism
- Communication
- Career objectives
- Overall suitability

Required TMX Action

[MARK DISCOVERY CALL COMPLETE]

Required Discovery Call information and notes must be entered before TMX allows this stage to be completed.

SCOUT ACTION 4: INITIATE SECURITY / SAFETY SCREENING

After the Scout has completed:

Application Review + Jordan Score + Discovery Call

the Scout initiates the required **Security / Safety Screening**.

This should be a dedicated function inside the Scout's application workspace.

TMX Action

[INITIATE SAFETY SCREENING]

The screening should be initiated manually by the authorized Scout/user.

The screening provider should NOT be hard-coded into the Scout workflow.

TMX should support a provider integration layer capable of connecting to:

- Checkr
- Certn
- DISA
- Other approved providers

The Scout should interact with TMX, not with a different TMX workflow for every provider.

The external provider handles its required candidate-facing process, including applicable authorization, consent, identity verification, and screening information.

TMX then receives the applicable provider status.

SCOUT ACTION 5: MONITOR SAFETY SCREENING

After initiation, the Scout should be able to see the current screening status from the application workspace.

TMX standardized statuses should include:

- **Not Started**
- **Invitation Sent**
- **Awaiting Applicant**
- **Screening in Progress**
- **Screening Complete**
- **Review Required**
- **Cleared**
- **Disputed**
- **Unable to Complete**

The exact status returned by the screening provider should be mapped into TMX's standardized status system.

The Scout does not need to see sensitive report information unless their role/permissions specifically allow it.

The primary Scout-facing purpose is to know whether the required screening process has been completed and whether additional authorized review is required.

SCOUT ACTION 6: SCREENING REPORT RETURNS

When the screening provider completes the screening:

- TMX receives the provider update.
- The prospect's screening status is updated.
- The application history records the screening event.
- The appropriate authorized user is notified when applicable.
- The Scout can see the applicable screening status.

Example:

Security / Safety Screening: CLEARED

or

Security / Safety Screening: REVIEW REQUIRED

If additional internal review is required, the application should remain restricted from final submission until the required review is completed.

The Scout should not be able to simply override a required screening status.

SCOUT ACTION 7: FINAL VETTING REVIEW

Once the required screening process has returned, the Scout performs their final review of the prospect.

TMX should provide a final checklist:

- Application Review — Complete
- Jordan Score — Complete
- Discovery Call — Complete
- Client Information — Complete
- Security / Safety Screening — Complete
- Required Screening Review — Complete
- Vetting Notes — Complete

- Client Packet — Complete
- Scout Recommendation — Complete

The Scout then enters their final recommendation:

Recommend for Further Consideration

Additional Information Required

Do Not Recommend

Unable to Complete Review

This is a Scout recommendation only.

It is **not** approval of representation.

SCOUT ACTION 8: COMPLETE CLIENT PACKET

Once the Scout has completed the qualification process, TMX should assemble/display the information required for the Client Packet.

The Client Packet should contain the relevant information collected during the Scout's workflow, including:

- Prospect profile
- Application information
- Jordan Score
- Discovery Call information and notes
- Professional background
- Supporting documentation
- Vetting observations
- Security / Safety Screening status
- Scout recommendation
- Other required qualification information

The Scout should review the packet before submission.

SCOUT ACTION 9: SUBMIT TO SUCCESS MANAGER

The final action is:

[**SUBMIT CLIENT PACKET TO SUCCESS MANAGER**]

This button must remain **LOCKED** until all required Scout tasks have been completed.

If something is missing, TMX should tell the Scout exactly what is preventing submission.

Example:

Client Packet Not Ready

The following required steps must be completed:

- Discovery Call
- Safety Screening
- Final Scout Review

Once all required steps are complete:

[**SUBMIT CLIENT PACKET TO SUCCESS MANAGER**]

becomes available.

Upon submission:

- Prospect status changes to **In Manager Review**.
- Success Manager receives the Client Packet.
- Scout qualification information is preserved.
- Jordan Score is preserved.
- Discovery Call notes are preserved.
- Safety Screening status is preserved.
- Scout recommendation is preserved.
- All timestamps and user actions are preserved.
- Submission is recorded in the application history.

TMX SYSTEM ENFORCEMENT

The system should enforce the Scout workflow rather than relying on the Scout to remember what to do.

Scout cannot submit until:

Application Review ✓

Jordan Score ✓

Discovery Call ✓

Security / Safety Screening ✓

Screening Returned / Required Review Complete ✓

Final Scout Review ✓

Client Packet Complete ✓

Submit to Success Manager

If any required step is incomplete, the submission button remains locked.

IMPORTANT ARCHITECTURE REQUIREMENT

The **Scout workflow** belongs to TMX.

The **actual Security / Safety Screening** is performed by the external screening provider.

Therefore, do not build the application workflow specifically around Checkr, Certn, or DISA.

The architecture should be:

TMX Scout Application Screening Workspace

TMX Security / Safety Screening Module

Provider Integration Layer

Checkr / Certn / DISA / Future Provider

The provider can change without requiring the Scout's application workflow to be redesigned.

The Scout should always experience the same TMX workflow regardless of which screening provider is connected.

END STATE

The desired Scout experience is:

A prospect submits an application. The Scout opens the application in TMX. TMX gives the Scout a structured list of required qualification tasks. The Scout reviews the application, completes the Jordan Score, conducts the Discovery Call, initiates the Security / Safety Screening, waits for the screening to return, completes the final vetting review, completes the Client Packet, and then submits it to the Success Manager.

The Scout should never have to guess what they are supposed to do next, and TMX should never allow an incomplete qualification file to move forward accidentally.

Bank Reconciliation Module

TMX Developer Spec: Bank Reconciliation Module (/reconciliation)

Objective

Build a two-way reconciliation interface modeled after RMX's Bank Reconciliation workspace. This module allows the Account Manager to match incoming brand wires/ACH payments against logged client invoices and verify cleared escrow balances prior to payday execution.

1. Header Controls & Account Selection

- **Account Selector Dropdown:**
 - Agency Escrow Account (Operating) (Default)
 - Talent Disbursement Account
 - Agency Operating / Commission Account
- **Statement Parameters:**
 - **Statement Date Picker:** Selects closing date (MM/DD/YYYY).
 - **Statement Ending Balance (\$):** Manual input field for bank statement balance.
 - **Cleared Difference Indicator:** Live indicator box showing **Difference = \$0.00** (Green when balanced, Red when out of balance).

2. Split Reconciliation Grid (Two-Column Layout)

The screen is split into two active clearing tables:

Left Panel: Deposits & Credits (Incoming Brand Receipts)

- Displays all pending brand invoice payments logged in TMX.
- **Columns:** Select Checkbox | Deposit Date | Client / Brand | Reference / Wire # | Gross Amount (\$).
- **Action:** Checking a row marks the brand receipt as **Cleared** in the database.

Right Panel: Checks & Debits (Outgoing Talent Disbursals)

- Displays all executed or pending talent payouts.
- **Columns:** Select Checkbox | Payout Date | Talent Name | Check / ACH # | Net Share (\$).
- **Action:** Checking a row reconciles the payout against cleared bank debits.

3. Summary Footer Bar & Post Button

- **Live Calculation Bar:**

- Cleared Deposits Total | Cleared Debits Total | Calculated Ending Balance | Difference
- **Primary Action Button: [Post Reconciliation]**
 - *Disabled* if Difference $\neq$ \$0.00.
 - *Enabled* when balanced. Clicking updates all selected deposits to **Cleared Status** and logs an audit record in the system ledger.

4. Workflow & KPI Guidelines

- **Usage:** Used by the Account Manager to prove that escrow bank funds equal system ledger balances before releasing payday batches.
- **Daily EOD Check:** Account Manager checks online bank clearing logs and matches incoming wires every weekday at **5:00 PM EDT**.
- **Friday KPI Submission:** Every **Friday at 4:00 PM EDT**, the **Account Manager** completes the weekly reconciliation, exports the **Bank Reconciliation Audit PDF**, and submits it to the Director alongside the weekly financial reports.

Cross-Device

TMX Developer Spec: Cross-Device Responsiveness & Adaptive UI Framework

Objective

Implement a mobile-first, fully responsive design system across all TMX routes (`/workspace`, `/reports`, `/university`, `/messaging`, `/reconciliation`). The interface must seamlessly adapt layouts, tables, launcher panels, and global navigation headers across mobile phones, tablets, laptops, and desktop screens without breaking functionality or data grid density.

1. CSS Breakpoint Architecture

Establish standard layout breakpoints across the entire TMX application framework:

- **Desktop / Ultrawide ($\geq 1280\text{px}$):** Full multi-column view with expanded sidebars, dual-pane reconciliation grids, and complete data tables.
- **Tablet / Laptop ($768\text{px} - 1279\text{px}$):** Collapsible sidebar, condensed parameter launcher grids, horizontally scrollable report tables.
- **Mobile / Mobile Responsive ($< 768\text{px}$):** Full vertical stacking, off-canvas navigation drawer, stacked card views for reports, sticky mobile actions.

2. Global Navigation Header & Sub-Banner (Mobile/Tablet Adaptations)

- **Top Header Adjustments ($< 768\text{px}$):**
 - **Command Launch Search (+K):** Collapses into a search magnifying glass icon on mobile. Tapping opens a full-screen search modal.
 - **Quick Nav Icons: ** (Menu Toggle) opens an off-canvas drawer containing the full navigation menu, quick tools, and system settings.
 - **Phone / SMS Icon (**): Remains visible in the top header with real-time unread notification badge overlays.
 - **User Profile & Role Switcher:** Initial avatar (**EB / SN**) opens a bottom sheet on mobile showing active role, company code, and profile options.
- **Sub-Header Page Banner (Blue Bar):**
 - Title stays left-aligned; page icons (, , ) remain pinned right as lightweight touch targets.

3. RMX-Style Parameter Launchers & Form Grids

- **Desktop ($\geq 1280\text{px}$):** Parameter controls display in a clean 3-column or 4-column inline grid.
- **Tablet ($768\text{px} - 1279\text{px}$):** Re-layouts into a 2-column grid structure.
- **Mobile ($< 768\text{px}$):**

- All launcher inputs (*Divisions, Date Pickers, Sort Options*) stack vertically in a single column.
- **Bottom Footer Bar (Generate as:)**: Sticky bottom bar pinned above mobile browser controls with touch-friendly action buttons (*PDF, Excel, Run Live View*).

4. High-Density Data Grids & Tables (Mobile Card Transformation)

Data-dense report tables must adapt cleanly to avoid horizontal distortion on small screens:

- **Horizontally Scrollable Tables (Default Tablet/Mobile Fallback):**
 - Wraps main data tables in a `.table-responsive` container with smooth touch scrolling and sticky left columns (*Talent Name / Client Name* remains fixed while scrolling secondary data).
- **Card-Stacking Mode (< 640px Viewports):**
 - Automatically transforms table rows into individual mobile data cards.
 - Each card displays the primary entity (*Talent/Client Name*), key metrics (*Gross Amount, Net Share*), and status badges (*Cleared, Pending, Overdue*) in a clean stacked block.

5. Touch Targets & Input Accessibility

- **Minimum Touch Area:** Ensure all buttons, icon triggers, status pills, and dropdown inputs have a minimum target size of **44px × 44px** for touch interaction.
- **Form Inputs:** Auto-disable zoom triggers on iOS by setting default input font sizes to **16px** minimum.
- **Modal Sheets:** Slide-out drawers (like discovery call notes or talent profile previews) transition to slide-up bottom sheets on mobile viewports.

Administrative Payout Approval Workflow

TMX Developer Spec: Administrative Payout Approval Workflow (/admin/payout-approvals)

Objective

Build a dedicated approval queue in the TMX admin workspace to route, review, and execute payout requests submitted by talent via their portal. This enforces the agency escrow rule: **No payout is approved until brand funds have cleared.**

1. Header Controls & Summary Metrics

- **Top KPI Cards:**
 - **Pending Approval Requests (\$)**: Total dollars queued from talent payout submissions.
 - **Cleared Escrow Balance (\$)**: Bank-cleared funds ready for immediate release.
 - **Uncleared Brand Deposits (\$)**: Held funds awaiting bank settlement.
- **Filter Controls:**
 - Dropdowns: **Division** | **Assigned Account Manager** | **Status** (Pending Review, Approved - Processing, Rejected, Disbursed).

2. High-Density Payout Approval Grid

- **Data Grid Columns:**
 - **Request ID / Date**: Timestamp (MM/DD/YYYY HH:MM).
 - **Talent Name**: Hyperlinked to talent profile drawer.
 - **Project / Campaign**: Billed project name (e.g., *Nike Commercial Shoot*).
 - **Requested Amount (\$)**: Dollar amount requested by talent.
 - **Cleared Escrow Check**: Visual indicator badge (Cleared & Verifiable = Green, Pending Bank Hold = Red).
 - **Payout Method**: ACH Direct Deposit, Wire, or Check.
 - **Action Control Buttons:**
 - **[Approve & Execute]** (Disabled if Escrow = Red; clicking logs approval and routes file to bank disbursal batch).
 - **[Reject / Flag]** (Opens modal to send structured reason notice to talent portal).

3. Transaction Audit Trail (/admin/financial-audit-log)

To maintain complete financial compliance and prevent accounting discrepancies, every portal transaction creates an unalterable audit log.

- **Audit Log Columns:**

- **Timestamp:** Date and time marker (MM/DD/YYYY - 12:00:00 EST).
- **User / Role:** Actor initiating the change (e.g., *Maya Rivera (Talent)* or *Devon Cruz (Account Manager)*).
- **Event Type:** Action taken (Payout Request Submitted, Escrow Cleared, Payout Approved, Contract Executed).
- **Entity / Campaign:** Billed project or agreement reference ID.
- **Amount (\$):** Financial delta associated with event.
- **IP / Device:** Security tracking signature.

Brand Client Portal

TMX Developer Spec: Brand Client Portal (/client/*)

Objective

Build a dedicated, white-labeled client self-service portal (/client/*) where corporate brands manage active bookings, track project invoices, execute usage contracts, and approve talent option holds without needing manual email back-and-forth.

1. Client Portal Authentication & Home Dashboard (/client/dashboard)

- **Top Navigation Bar (Persistent Black Theme):**
 - Logo: White-labeled Nzinga MGMT branding.
 - Nav Tabs: [Dashboard](#) | [Active Projects](#) | [Talent Options](#) | [Invoices & Billing](#) | [Contracts & Licenses](#) | [Company Settings](#).
- **Welcome Card (Left Panel):**
 - Displays Brand Name (e.g., *Nike Corporate*), Primary Contact (*John Doe*), and Assigned Account Manager details (*Devon Cruz*).
- **Financial Overview Cards (Center Panel):**
 - [Open Invoices \(\\$\)](#): Outstanding balance awaiting payment (\$10,000).
 - [Active Projects](#): Count of live campaigns currently in production.
 - [Cleared Payments \(\\$\)](#): YTD campaign spend processed through escrow.
 - Quick Actions: [[Pay Invoice](#)] | [[Request New Booking](#)].
- **Upcoming Production Schedule (Right Panel):**
 - Timeline view showing upcoming shoot dates, call times, and location details for booked talent.

2. Active Projects & Option Roster (/client/projects)

Replaces vague email attachments with a clean, actionable project dashboard:

- **Filter Bar:** [Project Status](#) (*All, Casting/Options, Confirmed Production, Wrapped*) | [Search Project Name](#).
- **Project Cards / Data Grid:**
 - [Project Title](#): Linked campaign name (e.g., *Fall Commercial Shoot*).
 - [Booked Talent](#): Profile thumbnails of assigned models/actors.
 - [Production Dates](#): Date range & call sheet status.
 - [Option Hold Status](#): Interactive pill badge ([Awaiting Availability](#) = Yellow, [Option Confirmed](#) = Green, [Released](#) = Gray).
 - [Action Control](#): [[Approve Option Hold](#)] / [[Request Option Release](#)].

3. Invoices, Billing & Escrow Payments (/client/billing)

Modeled directly after RMX's *Make a Payment* and *Charges/Transactions* views:

- **Open Charges Table:**
 - Columns: **Invoice #** | **Project Title** | **Due Date** | **Gross Billed (\$)** | **Payment Status** (Unpaid = Orange, Escrow Deposit Received = Blue, Cleared = Green).
 - Multi-select checkboxes to pay single or grouped invoices.
- **Payment Processing Modal (Integrated Checkout):**
 - Payment Methods: Credit Card or ACH Bank Wire Transfer.
 - Auto-Calculated Escrow Notice: *"Payments are safely deposited into Nzinga MGMT Escrow prior to project execution."*
 - Action Button: **[Process Escrow Payment (\$10,000)]**.

4. Contracts & Usage Licensing (/client/contracts)

Replaces the generic RMX "Leases" tab with agency-specific licensing tracking:

- **Licensing & Agreements Data Grid:**
 - **Document Title:** (e.g., *Usage Rights Agreement - Social Cutdowns*).
 - **Associated Talent:** Maya Rivera.
 - **Usage Scope:** Term limits & territory rights (e.g., *1-Year Digital / North America*).
 - **Execution Status:** (Awaiting Brand Signature = Red, Fully Executed = Green).
 - **Actions:** **[Review & Sign via DocHub]** / **[Download Executed PDF]**.

5. Corporate Account & Team Access (/client/settings)

Modeled after RMX *User Profile* and *Account Information*:

- **Company Profile:** Corporate address, tax ID, and billing contact details.
- **Team Permissions:** Allows the primary brand manager to invite additional team members (e.g., Producers, Billing Admins) with role-based access to view invoices or download call sheets.

Talent Web Access (TWA) Portal

TMX Developer Specification: Talent Web Access (TWA) Portal (`/talent/*`)

Objective

Re-architect the `/talent/*` portal into a white-labeled, enterprise-grade client interface. This specification upgrades the existing UI layout into a high-density, high-contrast system modeled after RMX Tenant Web Access—removing "AI-feeling" whitespace while embedding automated contract notifications, career tracking, and 80/20 financial transparency.

1. Global Shell, Navigation & Theme Styling

Layout Container & Visual Tokens

- **Container Width:** Full-width responsive container (`max-width: 1440px`, centered) replacing narrow, centered vertical blocks.
- **Surface Styling:** Dark slate card containers (`#111827`) with subtle structural borders (`1px solid #1F2937`) over a deep background (`#0B0F17`).
- **Typography & Contrast:** High-contrast primary text (`#FFFFFF`), secondary labels (`#9CA3AF`), and bold numerical callouts (`font-weight: 700`).
- **Status Badges (Pills):**
 - `Active Client / Cleared / Confirmed`: Emerald Green (`#059669`)
 - `Action Required / Pending Escrow / In Review`: Amber Yellow (`#D97706`)
 - `Awaiting Signature / Expired / Declined`: Crimson Red (`#DC2626`)
- **Component Standards:** All raw text links (e.g., `Open calendar →`) must be replaced with solid, styled touch-friendly buttons (`min-height: 44px`).

Top Navigation Header

- **Brand Logo:** White-labeled Nzinga MGMT logo pinned top-left.
- **Navigation Tabs (Pill Indicators):** `Dashboard` | `Career Activity` | `Money` | `Files & Media` | `Messages` | `Settings`.
- **User Identity Bar (Top Right):** Talent Avatar (`MR`), Legal Name (*Maya Rivera*), Roster ID (`NZG-200101`), Assigned Agent (*Sarah Chen*), and `[ Sign Out ]` button.

2. Automated E-Signature & Contract Workflow

When an admin or agent dispatches a document via DocHub (*contracts, representation agreements, usage buyouts*), TMX must execute three simultaneous notification actions:

1. **Instant Email Alert:** Sends an HTML email with document details, a 72-hour signing deadline notice, and a primary CTA button: [**Sign Document in Portal**].
2. **Global Dashboard Alert Banner:** Displays a top-level alert banner on `/talent/home`:
 **Action Required: You have 1 pending document awaiting signature.** Adds a red notification badge overlay on the **Files & Media** navigation tab.
3. **In-Portal Signing Overlay:** In `/talent/files`, updates the document badge to **Awaiting Signature** (Red Pill) with an embedded [**Sign Document**] button that launches the DocHub signing modal directly inside the portal.

3. Tab-by-Tab Screen Specifications

Tab 1: Talent Dashboard (`/talent/home`)

- **Top KPI Summary Row (4 High-Density Cards):**
 - **Career Activity:** Confirmed shoots + pending opportunities count.
 - **Talent Share Outstanding:** Net unpaid bookings awaiting brand clearing (\$10,240).
 - **Trust Account (Escrow Balance):** Cleared bank funds ready for payout (\$8,000).
 - **Open Updates:** Active requests & pending notifications count.
- **"Up Next" Production Card:** Highlights immediate shoot details (*Project Title, Call Time, Location*).
 - Action Buttons: [**Confirm Call Time**] | [**View Call Sheet PDF**] | [**Open Calendar**].

Tab 2: Career Activity & Calendar (`/talent/activity`)

- **Submitted Opportunities Table:** Itemizes incoming casting/hold requests with campaign rate, proposed dates, and [**Confirm Availability**] / [**Decline**] action buttons directly in table rows.
- **Confirmed Bookings Grid:** Table displaying booked shoots, studio locations, call times, and downloadable production briefs.
- **Interactive Booking Calendar:** Monthly/weekly view showing shoots, option holds, and deadlines, with an [**+ Add Blackout Dates**] input form.

Tab 3: Financial Transparency & Money (`/talent/money`)

- **Financial Summary Cards:** Cleared Trust Balance (\$8,000) | Pending Brand Clearing (\$2,240) | YTD Total Paid (\$24,500).
- **Itemized Earnings Data Grid:**
 - Columns: Booking Date | Client / Campaign | Gross Billed (\$) | 20% Agency Cut (\$) | 80% Net Share (\$) | Escrow Status (Cleared = Green, Pending Hold = Yellow).
- **Payout Request Form:** Allows talent to input custom draw amounts against cleared trust balances, select direct deposit methods (ACH/Wire), and click [**Submit Payout Request**].

Tab 4: Files & Media Assets (/talent/files)

- **Contracts & Agreements Section:** Structured table listing active representation agreements, execution dates, signature status badges, and [**View**] / [**Sign Document**] / [**Download PDF**] action controls.
- **Digital Assets & Portfolio:** Grid view displaying high-res headshots, comp cards, and video reels with upload/download permissions.
- **Agency Production Materials:** Downloadable call sheets, brand briefs, and tax forms (W-9 / 1099).

Tab 5: Communications & Support Desk (/talent/messages)

- **Assigned Agent Banner:** Displays assigned agent photo, direct line, and [**Email Agent**] button.
- **Structured Support Ticket Form:** Form dropdowns (*Travel Reimbursement, Calendar Conflict, Contract Query, Profile Update*) with attachment dropzone and text area.
- **Activity & Notification Audit Log:** Chronological log of system notifications (e.g., "Invoice INV-2026-004 issued to client").

Tab 6: Profile, Vitals & Settings (/talent/settings)

- **Avatar & Credentials:** Profile photo upload, email/phone updates, and password management.
- **Measurements & Vitals Form (UDF Fields):** High-density form grid for Height, Weight, Bust/Chest, Waist, Hips, Shoe Size, Hair Color, and Eye Color.
- **Social Media Metrics:** Inputs for Instagram, TikTok, and YouTube handles, follower counts, and engagement stats.
- **Emergency & Contact Preferences:** Emergency contact details and notification toggles (Email, SMS, Portal).

API Integrations & External Services

TMX Developer Specification: API Integrations & External Services

Objective

Define all external API connections, authentication flows, webhook triggers, and data payloads required to power TMX. This specification outlines how **DocHub** (exclusive document engine), **Chase Bank** (core financial and escrow infrastructure), **Stripe & Plaid**, **Twilio**, and **SendGrid/Postmark** interoperate to create an audit-ready, automated platform for Nzinga MGMT.

1. Primary Integration: DocHub (Exclusive Contract & E-Signature Engine)

DocHub serves as the single source of truth for all representation agreements, booking contracts, usage buyouts, and onboarding documentation via its REST API and Web Embed SDK.

Core Endpoints & Workflows

- **Template Hydration (POST /v1/templates/{template_id}/build):**
 - Hydrates DocHub templates with dynamic TMX data (*Talent Legal Name, Division, 20/80 Split Logic, Shoot Dates, Guarantee Amounts*).
- **Signature Dispatch (POST /v1/signature_requests):**
 - Dispatches contracts to talent or brand clients. Automatically applies a **72-hour expiration window**.
- **Embedded Portal Signing Overlay (DocHub Web Embed SDK):**
 - Renders signing workflows directly inside `/talent/files` and `/client/contracts` via secure iframe/SDK token so users complete signings without leaving TMX.

Webhook Listener Endpoint (POST /api/webhooks/dochub)

TMX must maintain a secure, signature-verified webhook listener to process real-time DocHub status events:

- **document.sent:** Updates TMX database status to **Awaiting Signature**, triggers top-level portal alert banners, and sends instant email notices.

- **document.signed:** Updates portal badge to **Partially Signed** or **Fully Executed**.
- **document.completed:** Stores the finalized, signed PDF in TMX file storage (**/talent/files**), updates contract status to **Active Client**, and clears dashboard warning banners.
- **document.expired:** Triggers automated follow-up reminders and flags the record in **Report #4: Onboarding & Offboarding (/report-onboarding)**.

2. Core Financial Infrastructure: Chase Bank & Plaid

TMX integrates directly with **JPMorgan Chase & Co.** to manage agency operating, trust, and escrow accounts, guaranteeing full auditability across all financial movements.

Segregated Account Architecture & Routing Logic

- **1. Chase Escrow Holding Account (Client Campaign Funds):**
 - Inbound holding vault for corporate brand campaign wires and ACH payments (e.g., Nike deposits).
 - Funds are tagged as **Pending Bank Clearing** until verified by Chase statement feeds, after which TMX auto-calculates the **20% agency commission** and **80% net talent share**.
- **2. Chase Talent Disbursement Account (Trust Account):**
 - Dedicated outbound payout account.
 - Once escrow clears, the 80% net talent share transfers to this account for payday execution via direct ACH or Chase NACHA file export.
- **3. Chase Agency Operating Account (Revenue & Commissions):**
 - Operational account holding the agency's retained 20% commission cuts, subscription revenue, and business expense funds.

Technical Data Sync & Payout Workflows

- **Plaid API (/transactions/sync & /link/token/create):**
 - Powers secure ACH bank account verification when talent link direct deposit accounts in **/talent/settings**.
 - Auto-syncs daily Chase transaction feeds at **6:00 AM EDT** to match incoming deposit references against open client invoices (**/report-ar-aging**).
- **Chase NACHA Batch File Generator (.ach Format):**
 - Generates Chase-compliant NACHA transaction batch files for approved talent payouts in **/admin/payout-approvals** for direct upload to Chase Business Online.
- **Reconciliation Feed (/reconciliation):**

- Feeds live Chase statement closing balances into the Bank Reconciliation workspace to enable \$0.00 balance verification every Friday at **4:00 PM EDT**.

3. Stripe Connect API (Client Billing & Checkout)

- **Brand Invoice Checkout (POST /v1/invoices & Payment Intents):**
 - Powers client-side credit card and ACH payment processing within the Brand Client Portal (/client/billing).
- **Direct Escrow Routing:**
 - Directs all processed client payments straight into the Chase Escrow Holding Account while recording transaction IDs in the TMX audit log.

4. Twilio API (Text Messaging Center & Instant Alerts)

- **Programmable Messaging API (POST /v1/Accounts/{AccountSid}/Messages.json):**
 - Powers two-way SMS communications in the TMX Text Messaging Center.
- **Automated SMS Triggers:**
 - Sends automated SMS alerts for urgent call-sheet updates, option hold expirations, 72-hour contract signing notices, and payday release notifications.
- **Twilio Inbound Webhook (POST /api/webhooks/twilio):**
 - Captures incoming client and talent text replies and routes them directly to the assigned agent's TMX messaging inbox.

5. SendGrid / Postmark (Transactional Email Engine)

- **Transactional SMTP/REST API:**
 - Delivers high-deliverability system notifications, including instant DocHub signing alerts ("**Action Required: Document Ready for Signature**"), weekly KPI submission reminders, and account security resets.

Summary Checklist for Developer Execution

1. **DocHub API:** Exclusive engine for template generation, embedded portal signing, and 72-hour signing webhook listeners.
2. **Chase Bank & Plaid:** Direct statement synchronization, incoming wire matching for escrow clearing, and NACHA payout file generation across Chase Escrow, Trust, and Operating accounts.
3. **Stripe Connect:** Card/ACH processing for corporate brand checkout in the Client Portal.
4. **Twilio API:** Two-way SMS messaging and instant call-sheet/payday text alerts.

5. **SendGrid / Postmark:** Transactional email delivery for signature notices and system alerts.
